Appendix C: Sample Mathematics NAEP Questions
Appendix D: Scaled Scores and Percent of Students at Each Achievement Level
Appendix E: Summary of Scaled Scores of TUDA Districts
Appendix F: Average Scaled Scores and Achievement-Level Results by Race/Ethnicityby District

The Trial Urban District Assessment (TUDA) was started in 2002 as part of the National Assessment of Educational Progress (NAEP). In 2009, Boston Public Schools was one of eighteen urban districts that voluntarily participated in the NAEP assessment. Boston participated in grades 4 and 8 reading and mathematics assessments in 2003, 2005, 2007 and 2009, as well as in the Science assessments in 2005 and 2009, and Writing in 2007. This report examines the 2009 Mathematics results of the TUDA districts and compares their performance to each other, to Large Central Cities (LC), and to the Nation.

## Boston's Performance over Time:

- Boston’s average scores in both grades 4 and 8 have continued to increase each year since the district first participated in NAEP/TUDA in 2003.
- In grade 4, while the Nation's average score remained unchanged since 2007, Boston's average scaled score in 2009 was up 3 points, making it one of only two TUDA districts to experience a gain since the last assessment. Boston's gain since 2003 is even more impressive, totaling 16 points and surpassing the 5 -point gain nationally and 7-point gain experienced by Large Cities.
- Boston's $8^{\text {th }}$ grade students also experienced a significant gain in average scores since 2003: the 2009 score was up 17 points, compared to a 6 -point increase nationally and a 9-point increase for Large Cities.

## Boston's Performance Compared to other TUDA Districts, Large Cities, and the Nation:

- While Boston's average scores were 3 points lower than the Nation in both grades 4 and 8 , the district performed significantly better than Large Cities across the country (with a population over 250,000 ): the average score was 5 points higher in grade 4 and 8 points higher in grade 8.
- Of the 18 participating TUDA districts, Boston was one of only five to score significantly higher than Large Cities nationwide in both the grade 4 and grade 8 math assessments.
- Compared to other TUDA districts, Boston's average scores in both grades 4 and 8 were higher than or equal to those of 15 other districts. Only two districts scored higher than Boston.

## Performance by Racial/Ethnic Group:

- From 2003 to 2009, students in all racial groups made statistically significant gains in their average scores on the $4^{\text {th }}$ grade test. Black students saw a 15 -point gain while Asian, Hispanic, and White students experienced a 17-point gain.
- The gains made by Boston's $8^{\text {th }}$ grade students between 2003 and 2009 were also statistically significant across all ethnic groups.
- Despite consistent performance gains for students of all ethnic backgrounds, the gaps in performance between Boston’s Asian/White students and Black/Hispanic students persist in both $4^{\text {th }}$ and $8^{\text {th }}$ grade.
- However, Boston's Black students outperformed their peers across the nation: $4^{\text {th }}$ graders in Boston had an average score of 231, compared to the national average of 222. Similarly, Black students in Boston had an average score 12 points higher than the average for Large Cities. Importantly, Boston's Black students had the highest scaled scores of all TUDA districts in $4^{\text {th }}$ grade.
- Boston's Hispanic students in $4^{\text {th }}$ grade also had higher average scores than Hispanic students across the Nation and in Large Cities. Compared to other TUDA districts, Boston's Hispanic $4^{\text {th }}$ graders performed as well as or significantly better than all other districts, with only one exception.
- Eighth grade results for Black and Hispanic students also show that Boston students performed better than their peers in Large Cities and in most other TUDA districts.

## Low-Income Students:

- In grade 4, low-income students in Boston scored significantly higher than the Nation (by 5 points) and Large Cities (by 8 points). Boston's average was also the second highest among the TUDA districts.
- Among $8^{\text {th }}$ graders, the performance of Boston's low-income students was the highest of all TUDA districts, higher than the Nation, and higher than the Large City average.

## Students with Disabilities:

- In both $4^{\text {th }}$ and $8^{\text {th }}$ grade, students with disabilities in Boston outperformed their peers in Large Cities. Their average score was not significantly different form the national average. Boston's special education students also performed better than most TUDA districts.

## English Language Learners:

- Boston's English Language Learners (ELLs) had an average scaled score in $4^{\text {th }}$ grade higher than the national average and higher than their peers in Large Cities.
- ELL students in $8^{\text {th }}$ grade had the same average score as their peers in Large Cities. However, Boston's ELLs scored somewhat lower than the national average, although the difference was not statistically significant.

## Performance by Achievement Level:

- In 2009, $80 \%$ of Boston's 4th grade students scored at the basic level or above on the math assessment. Only one TUDA district had a higher percentage. Boston’s performance was also better compared to Large Cities (72\%) and not statistically different from the Nation (82\%).
- In grade 8, the percentage of students in Boston who performed at or above Basic was $68 \%$, higher than Large Cities (61\%) but 2 points lower than the Nation (71\%).
- For both grades 4 and 8, Boston made significant improvements in the percentage of students performing at or above Proficient since 2003. Boston also saw a significant improvement in grade 8 from 2007 to 2009, with a 4-point increase. Since 2003, the percentage of $4^{\text {th }}$ graders who are proficient/advanced increased 19 points, compared to 9 points for large cities; and the percentage proficient/advanced in $8^{\text {th }}$ grade increased 14 points, compared to 8 points for Large Cities.

Developed in 1969, the National Assessment of Educational Progress (NAEP), also referred to as the Nation's Report Card, is the largest nationally representative assessment of what America's students know and can do. It provides a common yardstick for measuring the progress of students' education across the country. While each state has its own unique assessment, NAEP asks the same questions in every state, making state comparisons possible.

In 2001, following discussions between the National Center for Education Statistics (NCES), the National Assessment Governing Board (NAGB), and the Council of the Great City Schools (CGCS), Congress appropriated funds for district-level assessments on a trial basis, similar to the trial for state assessments that began in 1990. As a result, the NAGB passed a resolution approving the selection of urban districts for participation in the Trial Urban District Assessment (TUDA), a special project within NAEP that would make assessment results available at the district level. Representatives of the Council of Great City Schools worked with the staff of NAGB to identify districts to be invited for the trial assessment. Districts were selected based on a number of characteristics, including size, minority concentrations, federal program participation, socioeconomic conditions, and percentages of students with disabilities (SD) and English Language Learners (ELL).

In 2002, five urban school districts participated in NAEP's first Trial Urban District Assessment (TUDA) in reading and writing. In 2003, ten urban districts (including the original five) participated in the TUDA program in reading and mathematics in grades 4 and 8: Atlanta, Boston, Charlotte-Mecklenburg, Chicago, Cleveland, Houston, Los Angeles, New York City, San Diego, and Washington, D.C. (District of Columbia Public Schools-DCPS). In 2005, Austin was added to the group of school systems that participated in the reading, math and science testing. These eleven large urban school districts continued participating in TUDA in 2007. In 2009, seven more districts (Baltimore City, Detroit, Fresno Unified, Jefferson County (KY), Miami-Dade County, Milwaukee, and Philadelphia) joined the TUDA project. A total of 18 urban school districts nationwide are now part of the TUDA program. Prior to 2009, only publicschool students, excluding charters, were sampled in the TUDA. However, beginning in 2009, charter schools were included in the NAEP TUDA results if they were also included in a district's Adequate Yearly Progress (AYP) reports.

Average scores on the NAEP are reported on a 0-500 scale. "Large Central Cities" refers to public schools located in cities with populations of 250,000 or more (as defined by NCES). Comparisons between national, district, and large city results are limited to public school students. In NAEP reports, the category "nation (public)" does not include Department of Defense or Bureau of Indian Education schools. It should also be noted that among the TUDA districts, fifteen of the eighteen consist entirely of schools in cities with a population of 250,000 or more; three of them however - Austin, Charlotte and Los Angeles- also include a number of fourth and eighth grade students enrolled in surrounding suburban or rural areas. Results for these three districts include data from all students, both urban and suburban/rural, a fact that must be kept in mind when comparing their performance to other districts, large cities, or the nation.

This report provides results for Boston's public school students in grades 4 and 8 from the National Assessment of Educational Progress (NAEP) assessment in mathematics. Results are reported by average scaled scores and by achievement levels (Basic, Proficient, and Advanced).

An overview of the mathematics assessment framework and comparisons with the MCAS relative to design, reporting and format are included in Appendices A and B. Appendix C presents sample questions from the 2009 fourth- and eighth grade NAEP assessment.

## DEMOGRAPHIC CONTEXT

The charts below display the percentage of students who participated in the 2009 TUDA NAEP Math test by their racial/ethnic identification, disability, English Language Learner status, and Low-Income status. The charts display not only Boston's participation rates, but also the Nation's and Large Cities', as well as the TUDA minimums and maximums.

In both grades 4 and 8, Boston's percentages for Black, Hispanic, and English Language Learner students fall in the middle range of the other TUDA districts. However, almost $80 \%$ of students in Boston receive free/reduced-price lunch, far larger than the national average, and significantly higher than Large Cities. Boston also has the highest participation rates for students with disabilities compared to other TUDA districts. These differences are important to consider in comparing results across jurisdictions.

In addition, because results are based on samples rather than entire populations, examining statistical significance is essential in determining differences across groups.

## Distribution of Selected Student Groups for TUDA Districts

Selected Grade 4 Demographic Characteristics:

Selected Grade 8 Demographic Characteristics:

## Grade 4

- Boston's average score in 2009 was significantly higher than in the three previous administrations of the NAEP, beginning in 2003.
- While the Nation’s average score remained unchanged since 2007, Boston’s average scaled score in 2009 was 236, up 3 points, making it one of only two TUDA districts to experience a gain since the last assessment (Washington DC was the second). Boston's gain since 2003 is even more impressive, totaling 16 points and surpassing the 5-point gain nationally and 7-point gain experienced by large cities.
- Although Boston's performance in 2009 was 3 points lower than the national average, it was significantly better compared to Large Cities*

[^0]
## Grade 8

- Boston's $8^{\text {th }}$ grade students had an average score significantly higher (8 points) than the average for Large Cities, and not significantly different than the national average.
- Boston's $8^{\text {th }}$ grade average score in 2009 was significantly higher than in 2003 and 2005, and continued to increase since 2007, though the gain was not statistically significant. Since 2003, Boston’s average score has increased 17 points, compared to a 6-point increase nationally and a 9-point increase for Large Cities.

## (2) 2009 Scaled Score Comparisons Across Jurisdictions

2009 Average Scale Score Comparisons - Large City (LC) vs TUDA Districts

Relative to each district listed at the top of the figure:
1- That Distict had significantly ( $\mathrm{P}<.05$ ) higher average scale score than Large City
= : No significant difference between that District and Large City
: That District had significantly ( $\mathrm{P}<.05$ ) lower average scale score than Large City

- Of the 18 participating TUDA districts, Boston was one of only five to score significantly higher than other Large Cities nationwide in both the grade 4 and grade 8 math assessments. (The other districts were Austin, Charlotte, Houston, and San Diego).
Boston's scaled scores for all students as well as for student subgroups are provided in Appendix D. Scaled scores for all TUDA districts are provided in appendix E.

2009 Average Scale Score Comparisons - Boston vs TUDA Districts

Relative to each district listed at the top of the figure:

- : Boston had significantly ( $\mathrm{P}<.05$ ) higher average scale score than that District
= : No significant difference between Boston and that District
V : Boston had significantly ( $\mathrm{P}<.05$ ) lower average scale score than that District
- In addition to its higher scores compared to Large Cities, Boston’s performance also stands out in comparison to other TUDA districts: in both grades 4 and 8, average scaled scores were higher than or equal to 15 other districts. Only two districts, Charlotte and Austin, scored higher than Boston in both grades 4 and 8 Mathematics.

## (3) Average Math Scaled Scores by Race/Ethnicity

Boston's Grade 4 Students: 2003-2009

- From 2003 to 2009, students in all racial groups made statistically significant gains in their average scores on the $4^{\text {th }}$ grade test. Black students saw a 15 -point gain, while Asian, Hispanic, and White students experienced a 17-point gain.

Boston's Grade 8 Students: 2003-2009

- The gains made by Boston's $8^{\text {th }}$ grade students between 2003 and 2009 were also statistically significant across all ethnic groups: improvements ranged from 12 points for Asian students, to 22 points for White students.
- Despite consistent performance gains for students of all ethnic backgrounds, the gaps in performance between Boston’s Asian/White students and Black/Hispanic students persist in both $4^{\text {th }}$ and $8^{\text {th }}$ grade.
Appendix F provides detailed information on the performance of students by racial group.

## Boston's Black Students Compared to the Nation, Large Cities, and other TUDA Districts

Grade 4 Black Students
2009 Average Scale Score Comparisons Boston and TUDA Districts

- Despite continued disparity in the performance of Black students compared to their White and Asian peers, the district's Black students outperformed their peers across the nation: $4^{\text {th }}$ graders in Boston had an average score of 231, compared to the national average of 222. Similarly, Black students in Boston had an average score 12 points higher than the average for Large Cities. Importantly, Boston's Black students had the highest scaled scores of all TUDA districts, tied with Charlotte's.

- In Grade 8, Boston's black students again outperformed their peers across the Nation and in Large Cities. Compared to the TUDA districts, Boston's black students performed better than 13 jurisdictions and were not significantly surpassed by any.

## Boston's Hispanic Students Compared to the Nation, Large Cities, and other TUDA Districts

Grade 4 Hispanic Students
2009 Average Scale Score Comparisons Between Boston and TUDA Districts

$\ddagger$ Reporting standard not met. Sample size insufficient to permit a reliable estimate.

- Boston's Hispanic students in $4^{\text {th }}$ grade also had higher average scores (232) than Hispanic students across the Nation (227) and in Large Cities (226). Compared to other TUDA districts, Boston's Hispanic $4^{\text {th }}$ graders performed as well as or significantly better than all other districts, with only one exception. (Miami-Dade's average score was significantly higher than Boston's).

Grade 8 Hispanic Students 2009 Average Scale Score Comparisons Between Boston and TUDA Districts

- In Grade 8, Boston’s Hispanic students performed as well as their national peers, and better than Hispanic students in Large Cities. Among TUDA districts, only Houston's Hispanic student group had a significantly higher average than Boston's.

# (4) Average Math Scaled Scores for Other Student Groups 

## Students eligible for Free/Reduced Lunch

Grade 4 Low-Income Students
2009 Average Scale Score Comparisons Between Boston and TUDA Districts

- In grade 4, low-income students in Boston scored significantly higher than the Nation (by 5 points) and Large Cities (by 8 points). Boston's average was also the second highest among the TUDA districts and not significantly different from New York City's.

Grade 8 Low-Income Students 2009 Average Scale Score Comparisons Between Boston and TUDA Districts

* Significantly different ( $\mathrm{P}<.05$ ) from Boston.
- Among $8^{\text {th }}$ graders, the performance of Boston's low-income students was the highest of all TUDA districts, higher than the Nation, and higher than the Large City average.

## Students with Disabilities

Grade 4 Students with Disabilities
2009 Average Scale Score Comparisons Between Boston and TUDA Districts

- In $4^{\text {th }}$ grade, students with disabilities in Boston outperformed their peers in Large Cities. Their average score was not significantly different form the national average. Boston's special education students also performed better than most TUDA districts, scoring lower than only two, though the differences were not statistically significant.

Grade 8 Students with Disabilities 2009 Average Scale Score Comparisons Between Boston and TUDA Districts

- In $8^{\text {th }}$ grade, students with disabilities in Boston outperformed their peers in Large Cities. Their average score was not significantly different form the national average. Compared to other TUDA districts, Boston’s special education students also scored higher than most, with only Austin's average being significantly better.

## English Language Learners

Grade 4 English Language Learners
2009 Average Scale Score Comparisons Between Boston and TUDA Districts

- Boston's English Language Learners (ELLs) had an average scaled score in $4^{\text {th }}$ grade higher than the national average and higher than their peers in Large Cities. Compared to other TUDA districts, only two out of the 13 districts with a sufficient ELL sample had significantly higher averages than Boston.

Grade 8 English Language Learners 2009 Average Scale Score Comparisons Between Boston and TUDA Districts

- ELL students in $8^{\text {th }}$ grade had the same average score as their peers in Large Cities and lower than the national average, though the difference was not statistically significant. Boston's ELL average was lower than that of 8 TUDA districts, but only Charlotte's performance was significantly better.

## (5) Performance by Achievement Level: Boston vs. Nation, Large Cities, and TUDA Districts

## Grade 4 Percentage of Students Scoring at or Above Basic:

\# Estimate rounds to zero.
NOTE: Detail may not sum to totals because of rounding.

- In 2009, $80 \%$ of Boston's $4^{\text {th }}$ grade students scored at the basic level or above on the math assessment. This percentage was significantly higher or equal to that in all but one other TUDA district. Boston's performance was not significantly different from the Nation overall (82\%). However, a higher percentage of Boston students performed at the Basic level or above compared to students in Large Cities (72\%).

## Grade 8 Percentage of Students Scoring at or Above Basic:

\# Estimate rounds to zero.
NOTE: Detail may not sum to totals because of rounding.

- In grade 8, the percentage of students in Boston who performed at or above Basic (68\%) was higher compared to 12 other TUDA districts, as well as Large Cities (61\%). Boston's percentage was significantly lower only as compared to Austin (75\%) and the Nation (71\%).

Percentage of Students Scoring at or Above Proficient in 2009: Boston vs. TUDA Districts

Relative to each district listed at the top of the figure:

1. Boston had significantly higher percentage of students scored in Proficient and Advanced than that District
$=$ : No significant difference between Boston and that District

- Boston had significantly lower percentage of students scored in Proficient and Advanced than that District
- In 2009, Boston’s $4^{\text {th }}$ grade proficient/advanced rate (30\%) was significantly higher than that of nine TUDA districts. Boston's rate was about the same as that of Large Cities; and lower than just two districts, Austin and Charlotte.
- Boston's $8^{\text {th }}$ graders performed significantly better than students in Large Cities, with a proficient/advanced rate of $32 \%$. Compared to all the other TUDA districts, Boston's performance was second only to Austin's.

Percentage of Students Scoring at or Above Proficient, 2003-2009

|  | Grade 4 |  |  |  | Grade 8 |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 2003 | 2005 | 2007 | 2009 | 2003 | 2005 | 2007 | 2009 |
| LARGE CITY | 20** | 24** | 28 | 29 | 16** | 19** | 22** | 24 |
| Atlanta | 13** | 17** | 20 | 21* | 6** | 7** | 11 | 11* |
| Austin | -- | 40 | 40 | 38* | -- | 33** | 34** | 39* |
| Baltimore | -- | -- | -- | 13* | -- | -- | -- | 10* |
| Boston | 12** | 22** | 27 | 31 | 17** | 23** | 27** | 31* |
| Charlotte | 41 | 44 | 44 | 45* | 32 | 33 | 34 | 33* |
| Chicago | 10** | 13 | 16 | 18* | 9** | 11** | 13 | 15* |
| Cleveland | 10 | 13 | 10 | 8* | 6 | 6 | 7 | 8* |
| Detroit | -- | -- | -- | 3* | -- | -- | -- | 4* |
| District of Columbia | 7** | 10** | 14 | 19* | 6** | 7** | 8** | 12* |
| Fresno | -- | -- | -- | 14* | -- | -- | -- | 15* |
| Houston | 18** | 26 | 28 | 30 | 12** | 16** | 21 | 24 |
| Jefferson County | -- | -- | -- | 31 | -- | -- | -- | 22 |
| Los Angeles | 13** | 18 | 19 | 19* | 7** | 11** | 14 | 13* |
| Miami-Dade | -- | -- | -- | 33 | -- | -- | -- | 22 |
| Milwaukee | -- | -- | -- | 15* | -- | -- | -- | 7* |
| N.Y.C. | 21** | 26** | 34 | 35* | 20** | 20 | 22 | 26 |
| Philadelphia | -- | -- | -- | 16* | -- | -- | -- | 17* |
| San Diego | 20** | 29** | 35 | 36* | 18** | 22** | 24** | 32* |

- The percentage of students scoring at or above Proficient in mathematics in 2009 for Boston was higher than that for Large Cities in both grades (4 percentage points in
grade 4 and 7 percentage points in grade 8 ); however, only the grade 8 improvement was statistically significant.
- For both grades 4 and 8 , Boston made significant improvements in the percentage of students performing at or above Proficient since 2003 and 2005. Boston also saw a significant improvement in grade 8 from 2007 to 2009, with a 4 -point increase. Since 2003, the percentage of $4^{\text {th }}$ graders who are proficient/advanced increased 19 points, compared to 9 points for large cities; and the percentage proficient/advanced in $8^{\text {th }}$ grade increased 14 points, compared to 8 points for Large Cities.

## APPENDIX A: Mathematics Assessment Framework

## Mathematics

The 2005 NAEP mathematics framework, which defines the content and format for the 2009 assessment in grades 4 and 8, was developed through a comprehensive national consultative process and approved by NAGB. The mathematics framework calls for the assessment to include questions based on five mathematics content areas: 1) Number Properties and Operations; 2) Measurement; 3) Geometry; 4) Data Analysis, Statistics, and Probability; and 5) Algebra. In addition, the framework specifies that each question should measure one of three levels of mathematical complexity (refers to the cognitive demands of the item) - low, moderate, and high. By considering these two criteria (mathematical content and mathematical complexity) for each question, the framework ensures that NAEP assesses an appropriate balance of content along with a variety of ways of knowing and doing mathematics.

## Accommodations

It is NAEP's intent to assess all selected students from the target population. Beginning in 2002, students with disabilities and English language learners who require accommodations have been permitted to use them in NAEP, unless a particular accommodation would alter the skills and knowledge being tested. For example, calculators are not permitted on non-calculator sections of the NAEP mathematics test for students who would otherwise require non-standard accommodations provided on state assessment.

## Population Tested

Results from the 2003, 2005, 2007, and 2009 Trial Urban District Assessment are reported for the participating districts for public-school students at grades 4 and 8. The TUDA assessment employed larger-than-usual samples within the districts, making reliable district-level data possible. The samples were also large enough to provide reliable estimates on subgroups within the districts, such as female students or Hispanic students. Because students were sampled, all analyses are examined for statistical significance.

In Boston, students from 77 schools at grade 4 and 33 schools at grade 8 participated in the 2009 NAEP assessments. A total of 2,192 students were assessed in mathematics (1,127 at grade 4 and 1,065 at grade 8 ).
(Intentionally left blank)

## Appendix B

NAEP vs. MCAS

## Introduction

Under the federal No Child Left Behind Law (NCLB) and state Education Reform Law of 1993, Boston Public School students are required to participate in two testing programs: the National Assessment for Educational Progress (NAEP) and the Massachusetts Comprehensive Assessment System (MCAS). The biennial NAEP Trial Urban School District Assessment (TUDA) provides important information for understanding the effectiveness of the BPS school system relative to other large urban school districts. By contrast, the annual MCAS test provides critical information about the academic performance of BPS compared to other Mass. Public schools, as well as a measure of how well BPS students have mastered the Mass. Curriculum standards.

This appendix provides a brief comparison of MCAS with NAEP, and serves as a guide for understanding and interpreting the test results.

## Overview

#### Abstract

NAEP - The National Assessment of Educational Progress (NAEP), known as the Nation's Report Card, is a Congressionallymandated assessment introduced in 1969. It includes state wide assessments since 1990, and the first Trial Urban School District Assessment (TUDA) since 2002. Based on policy set by the National Assessment Governing Board (NAGB), NAEP measures what students know and can do in key subject areas.

## Requirements for Student Participation

## Student Selection

## NAEP

- Based on sampling, a representative sample from randomly selected schools must participate in NAEP testing. For Trial District Assessment, the target sample sizes per subject per grade is 1200-1400 students. About 60 students, 30 per subject, at each participating school are tested.

## MCAS

- All Massachusetts public school students in the grades tested must take the MCAS tests.

## Page 2

## Student Participation

## NAEP

- Beginning in 2003, schools receiving Title I funding are required to participate in the biennial NAEP assessments in reading and mathematics at grades $4 \& 8$ if selected for the NAEP sample. Under NCLB, parental notification prior to testing is mandatory to inform parents of students who are sampled that their child's participation is voluntary.

## Inclusions \& Accommodations

## NAEP

Includes students with disabilities and English Language Learners (ELL) students in the assessment.

- ELL: NAEP includes all ELL students who have received instruction in English for at least three years. ELL students who have received instruction in English for less than three years are included as well unless school staff judged them to be incapable of participating in the assessment in English. In the NAEP mathematics assessment, bilingual test booklets (English and Spanish) are provided where needed.
- Students with Disabilities: Based on their IEP, students with disabilities are tested with appropriate accommodations unless the student's IEP team judges that he or she cannot participate or if NAEP does not allow an accommodation that the student requires.

## MCAS

- Every public school student is mandated to take the test. For Class of 2003 through Class of 2009, passing grade 10 ELA and Math tests is a part of the graduation requirement. Beginning with the Class of 2010, students must either achieve Proficient or Advanced on both ELA and Math tests, or pass both tests and fulfill the requirements of an Educational Proficiency Plan (EPP). Also, students must pass one of the high school MCAS Science and Technology/Engineering (STE) tests: Biology, Chemistry, Introductory Physics, or Technology/Engineering.

## MCAS

Includes students with disabilities and limited English Proficient (LEP) students in the assessment.

- LEP: Beginning in 2003, the new laws, No Child Left Behind Law as well as Question 2, the Massachusetts ballot initiative approved by voters in November 2002, require that all LEP students participate in state administered academic assessments, with the sole exception of LEP students in their first year of enrollment in U.S. schools. Schools have the option of administering the reading, LEP and History/Social Science tests to first-year LEP students.
- Students with Disabilities: The vast majority of students with disabilities take standard MCAS tests, either with or without accommodations as specified in their IEP plan. Only a very small number of students with the most significant disabilities take the MCAS Alternate Assessment.

## Test Content/Instrument Design

## Framework

## NAEP

The content and design of NAEP assessments were constructed based on the Assessment Frameworks that were developed by the National Assessment Governing Board (NAGB).

- Math: The 2009 NAEP Mathematic Framework (New framework for grade 12, content objectives for grades 4 \& 8 remain the same as the 2005 framework.)

## MCAS

The content knowledge and skills tested by MCAS were based on the learning standards in the Massachusetts Curriculum Framework for these content areas.

- Math: Massachusetts Mathematics Curriculum Framework, November 2000 and May 2004 Supplement

- Measurement (13\%, 13\%);
- Data analysis, Statistics
and Probability
(20\%, 20\%)

## Test Construction

## MCAS

## NAEP

- Matrix sampling, Long test short booklet, each student gets a small part booklet, each student gets a small part
of the test. Thus, no individual student scores.

## MCAS

- Every student gets the same test booklet that contains both common items and matrix sampling items. All students receive scores based on common items only.

## Type of Questions

## NAEP

- Math: Multiple-choice, Short-answer constructed-response, Extended constructed-response.

## Test Questions release

## NAEP

- For each subject, only selected test questions are released to the public. For current year and historical released test questions, please visit: http://nces.ed.gov/nationsreportcard/i tmrls/

## Testing Administration

2009 NAEP<br>Same for National NAEP, State NAEP, and Trial Urban District Assessment (TUDA) NAEP<br>Testing Date: 1/26/2009-3/6/2009<br>Testing Time (per subject): 50 minutes<br>Test Grade:<br>- Reading - Grades $4,8, \& 12$ (state pilot)<br>- Mathematics - Grades 4, 8, \& 12 (state pilot)<br>- Science - Grades 4, 8, \& 12 (state pilot)

Test Administration: The NAEP
Representative from NAEP data collection contractor is responsible for all assessment activities including coordinating, conducting, and sending test materials to the scoring facility.

Test Sequence: All tests are conducted simultaneously in the same classroom; some students take Reading, other students take either mathematics or Science test.

## MCAS

- Math: Multiple-Choice, short-answer, open-response items.

## MCAS

- Prior to 2009, for each subject and test grade, all common items are released to the public. Beginning in 2009 and onward only approximately $50 \%$ of common test items in grades 3-8 are released each year. For current year and historical released test items, please visit: http://www.doe.mass.edu/mcas/testitems .html

## 2009 MCAS

Testing Date:

- ELA Composition test: 3/31/2009 (make-up 4/7/2009)
- ELA Reading Comprehension (G3-8, \& 10): $3 / 30 / 2009-4 / 14 / 2009$
- Math: $5 / 11 / 2009-5 / 28 / 2009$
- Science: $5 / 12 / 2009-5 / 28 / 2009$

Testing Time (per subject): Un-timed

## Subjects \& Test Grade:

- ELA Reading Comprehension - Grades 3, 5, 6, \& 8
- English Language Arts - Grades 4, 7, \& 10
- Mathematics - Grades 3-8 \& 10
- Science \& Technology/Engineering Grades 5, 8, \& 9/10

Test Administration: School teachers/personnel are responsible for all assessment activities.
Test Sequence: All students take the same test in the same classroom.

## Scoring

## NAEP

- Short constructed-response questions are scored according to a three-level rubric:
Math: Correct, Partial, \& incorrect.
Reading: Evidence of full comprehension, Evidence of partial or surface comprehension, \& Evidence of little or no comprehension
- The extended constructed-response questions are rated based on a four-level rubric:
Math: Extended, Satisfactory, Partial, Minimal, \& Incorrect.
Reading: Extensive, Essential, Partial, \& Unsatisfactory

## Data Availability

## NAEP

- No student-level results
- No school-level results
- No district-level results (except TUDA)
- Not designed to assess a specific curriculum

## Reporting

## Performance Standard

NAEP

## Three Achievement Levels:

- Advanced: Represents superior performance
- Proficient: Represents solid academic performance for each grade assessed
- Basic: Denotes partial mastery of prerequisite knowledge and skills that are fundamental for proficient work at each grade.

## MCAS

- Multiple-choice and short-answer questions are scored blank/0 or 1.
- Open-response questions are scored on a 0 to 4 scale based on the scoring rubrics. Grade 3 Math that is scored using a 0 to 2 rubric.
- Student compositions are independently scored by two scorers on the following criteria: (1) a score of 1-6 in topic development, and (2) a score of 1-4 for the use of standard English writing conventions. Students receive the sum of the scores from each of the two readers.

## MCAS

- Student-level results
- School-level results
- District-level results
- Designed to measure the state's curriculum

## MCAS

## Four Performance Levels:

- Advanced/Above Proficient: Students at this level demonstrate a comprehensive and in-depth understanding of rigorous subject matter, and provide sophisticated solutions to complex problems.
- Proficient: Students at this level demonstrate a solid understanding of challenging subject matter and solve a wide variety of problems.
- Needs Improvement: Students at this level demonstrate a partial understanding of subject matter and solve some simple problems.
- Warning/Failing: Students at this level demonstrate a minimal understanding of subject matter and do not solve simple problems.

## Page 6

## Scaled Score

## NAEP

- Range: 0-500
- Scaled Score Corresponding to

Performance Level: vary by subject and test grade

| Reading: |  |  |  |  |  |
| :--- | ---: | ---: | :---: | :---: | :---: |
|  | Grade 4 | $\underline{\text { Grade 8 }}$ |  |  |  |
| Advanced | $268-500$ | $323-500$ |  |  |  |
| Proficient | $238-267$ | $281-322$ |  |  |  |
| Basic | $208-237$ | $243-280$ |  |  |  |
| Below Basic* | $0-207$ | $0-242$ |  |  |  |
| Mathematics: |  |  |  |  |  |
|  |  |  |  | Grade 4 | $\underline{\text { Grade 8 }}$ |
| Advanced | $282-500$ | $333-500$ |  |  |  |
| Proficient | $249-281$ | $299-332$ |  |  |  |
| Basic | $214-248$ | $262-298$ |  |  |  |
| Below Basic* | $0-213$ | $0-261$ |  |  |  |

* Below Basic is not an Achievement level
- Average scaled scores cannot be compared across grades.

## Interpreting Results

## NAEP

- The NAEP results as reported as average scores, and percentages are estimates because they are based on samples rather than the entire population(s).
- Differences in scores must be statistically significant in order to report a change.

## Additional Information

## NAEP

The Nation's Report Card (NAEP) (NCES) National Center for Education Statistics 1990 K Street, NW
Washington, DC 20006
Phone: (202) 502-7300
Web site:
http://nces.ed.gov/nationsreportcard/

## MCAS

- Range: 200-280
- Scaled Score Corresponding to Performance Level: same for all subjects and test grade

Performance Level Scaled Score
Advanced/Above Proficient 260-- 280
Proficient
240-258
Needs Improvement 220-238
Warning/Failing
0-218

- No scaled score is reported for Grade 3 Reading Comprehension test; only raw scores are reported.
- Averages must be calculated from raw scores, then converted to the corresponding scaled score.

## MCAS

- Comparisons of performance on subject area subscores across years must be made with caution because the number of items contributing to each subscore is relatively small and the difficulty of the items may very somewhat from year to year.

## MCAS

The Massachusetts Department of Elementary and Secondary Education Student Assessment Services Unit 75 Pleasant Street
Malden, MA 02148-4906
Phone: (781) 338-3625
Web site: http://www.doe.mass.edu/MCAS

## Appendix C

## Selected Sample of 2009 NAEP Mathematics Questions

Because of differences in curricular emphasis, the proportion of the assessment devoted to each content area varies by grade. The following are selected sample released questions from the 2009 NAEP assessment which represent content areas given more emphasis in grades 4 and 8.

## Grade 4:

1. Susie said, "I have $83 \Phi$ but fewer than 10 coins." Show in the chart how many of each coin she could have to total 834.

- Question Description: Determine one possible way to have a sum of money
- Type of Question: Short Constructed Response
- Difficulty: Easy (60.37\% Correct - National data)
- Content Area: Number properties and operations
- Complexity: Moderate
- Sample Correct Responses:

| Total Number <br> of coins | $25 \mathbb{c}$ | $10 \mathbb{c}$ | $5 \mathbb{c}$ | $1 \mathbb{c}$ |
| :--- | :---: | :---: | :---: | :---: |
| 7 | 3 | 0 | 1 | 3 |
| 8 | 2 | 3 | 0 | 3 |
| 9 | 2 | 2 | 2 | 3 |

- Score \& Description

Correct
Gives one or more correct solutions.

## Partial

Combination of coins equals $\$ .83$ but total number of coins is incorrect (has 10 or more)
OR
Has at least one correct solution but one or more incorrect solutions (half or more of the solutions are incorrect).

## Incorrect

Incorrect response

2. A turkey is put in the oven at 10:30 a.m. If the turkey takes $2 \frac{3}{4}$ hours to cook, at what time should it be taken out of the oven?
A. $\quad$ 12:15 p.m.
B. $12: 45$ p.m.
C. $\quad 1: 15$ p.m.
D. 1:45 p.m.

- Question Description: Solve arithmetic problem involving time
- Type of Question: Multiple Choice
- Difficulty: Hard (27.92\% Correct- National data)
- Content Area: Measurement
- Complexity: Low
- Correct Responses: The correct answer is C.
- Jurisdiction Data

Percentage of Students in Each Response Category by TUDA Districts

3. On the grid below, plot the points that have coordinates (B, 1), (B, 3), and (D, 5).

Plot 3 more points on the grid so that when you connect all 6 points you will make a rectangle.

List the coordinates for the 3 new points. $\qquad$
$\qquad$
Connect the 6 points to show your rectangle.

- Question Description: Plot points on grid to satisfy given conditions
- Type of Question: Extended Constructed Response
- Difficulty: Medium (44.33\% Correct - National data)
- Content Area: Geometry
- Complexity: Moderate
- Sample Correct Responses:
- Correctly plots the points (B, 1), (B, 3), and (D, 5)
- Correctly plots 3 other points that form a rectangle and gives their coordinates
- Connects the dots to form a rectangle

## - Score \& Description

Extended
Correct response

## Satisfactory

Plots 3 given points and plots 3 new points to form a rectangle, gives correct coordinates of new points, but does not draw the rectangle.
OR
Draws rectangle that contains the 3 given points and gives coordinates of 3 other points on the rectangle but one point is not clearly plotted.
OR
Plots 3 given points, plots 3 new points, draws rectangle, gives coordinates for 3 new points but one of the coordinates given does not match the point plotted. (e.g., gives (D, 2) instead of (D, 3)).

## Partial

Plots 3 given points and plots 2 or 3 new points that clearly form a rectangle; gives correct coordinates of 1 or 2 of the new points; may or may not draw the rectangle correctly.
OR
Plots 3 given points correctly and gives coordinates of 3 new points that clearly form a rectangle (but does not plot the new points).
OR
Plots 3 given points and 3 new points and plots/identifies additional point(s) on rectangle.

## Minimal

Plots 3 points clearly (either given points or new points or a combination).
OR
Plots 2 of the given points correctly and draws a rectangle using those 2 points. Points must be clearly marked.
OR
Lists coordinates for 3 new points that would clearly form a rectangle (e.g., (D, 1), (D, 3), (B, 5)) when connected; points may not be plotted.

OR
Draws a rectangle that includes the 3 given points, but points may not be clearly plotted.

3. The Morrisons are going to build a new one-story house. The floor of the house will be rectangular with a length of 30 feet and a width of 20 feet.

The house will have a living room, a kitchen, two bedrooms, and a bathroom. In part (a) below create a floor plan that shows these five rooms by dividing the rectangle into rooms.

Your floor plan should meet the following conditions.

- Each one of the five rooms must share at least one side with the rectangle in part (a); that is, each room must have at least one outside wall.
- The floor area of the bathroom should be 50 square feet.
- Each of the other four rooms (not the bathroom) should have a length of at least 10 feet and a width of at least 10 feet.

Be sure to label each room by name (living room, kitchen, bedroom, etc.) and include its length and width, in feet. (Do not draw any hallways on your floor plan.)
(a) Draw your floor plan on the figure below. Remember to label your rooms by name and include the length and width, in feet, for each room.

(b) Complete the table below by filling in the floor area, in square feet, for each room in your floor plan.

| Room | Floor Area <br> (in square feet) |
| :---: | :---: |
| Living |  |
| Kitchen |  |
| Bedroom |  |
| Bedroom |  |
| Bathroom |  |
| Total Floor Area | 600 |

- Question Description: Draw floor plan given conditions and compute areas
- Type of Question: Extended Constructed Response
- Difficulty: Hard (27.55\% Correct) - National data)
- Content Area: Geometry
- Complexity: High
- Sample Correct Responses:

There are many possible correct responses. All should contain square or rectangular rooms, a bathroom with an area of 50 square feet, and meet the other required conditions.

For a table to be correct, it must:

1. have entries that add up to 600, and
2. have an area of 50 for the bathroom, and
3. have dimensions for other rooms of at least 10 by 10.

For labeling of the drawing to be considered correct, it must:

1. have name of room, and
2. have room dimensions.

## - Score \& Description

## Extended

Correct response (complete and correctly labeled)

## Satisfactory

Correct table and correct drawing (in correct proportion) but drawing is missing some or all labels. OR

Correct drawing (in correct proportion) with all labels correct but table is missing or incomplete.

## Partial

Correct table but drawing is not presented in proportion that is consistent with table (may be because drawing includes an incorrect label).
OR
Correct drawing (in correct proportion) with some correct labeling but table may be incomplete and/or not in agreement with drawing in some respect.
OR
Table adds to 600, rooms are in proportion to table, but bathroom area may not necessarily be 50 .

## Minimal

Correct table only.
OR
50 sq. ft. for bathroom represented in some way.
OR
Obtains room areas in table that total to 600 .
OR
Drawing contains 5 rooms, each with at least one outside wall, and no hallways.
Incorrect
Incorrect response

## - Jurisdiction Data

$\cdots$ Significantly different ( $p<.05$ ) from nation in 2009.
$\cdots$ Significantly different (p<.05) from 2009.
NOTE: Beginning in 2009, results for charter schools not under the jurisdiction of a district are excluded from NAEP district results. Black includes African American. Hispanic includes Latino, and Pacific Islander includes Native Hawaiian. Race categories exclude Hispanic origin. DCPS = District of Columbia Public Schools.
