Appendix C: Sample NAEP Questions
Appendix D: Scale Scores and Percent of Students at Each Achievement Level
Appendix E: Summary of Scale Scores of TUDA Districts
Appendix F: Average Scale Scores and Achievement-Level Results by Race/Ethnicity by TUDA District

The Trial Urban District Assessment (TUDA) was started in 2002 as part of the National Assessment of Educational Progress (NAEP). In 2011, Boston Public Schools was one of twenty-one urban districts that voluntarily participated in the NAEP assessment. Boston participated in the grades 4 and 8 reading and mathematics assessments in 2003, 2005, 2007, 2009 and 2011, as well as in the Science assessments in 2005, 2009 and 2011 (Grade 8 only), and Writing in 2007.

This report examines the 2011 Reading and Mathematics results of the TUDA districts and compares their performance to each other, to public schools across the nation, and to public schools across Large Cities (LC).

## Reading

## Boston's Performance over Time:

- Boston's average scores in both grades 4 and 8 have continued to increase or hold steady each year since the district first participated in NAEP/TUDA in 2003.
- In grade 4, while the Nation’s average score remained unchanged since 2007, Boston's average scale score in 2011 was 217, up 7 points, a significant gain since 2007. Boston's gain since 2003 is even more impressive, totaling 11 points and significantly surpassing the 4 -point gain nationally and 7 -point gain experienced by large cities, indicating Boston's $4^{\text {th }}$ graders experienced a higher growth in reading performance resulting in a significantly narrower gap with the Nation.
- Boston's 8th grade average score in 2011 was not significantly different from any of the four previous administrations, while students across the nation and Large Cities significantly increased their scores by 3 and 6 points between 2003 and 2011, respectively.

## Boston's Performance Compared to other TUDA Districts, Large Cities, and the Nation:

- In grade 4, while Boston’s average score was significantly lower than the Nation by 3 points, the district performed significantly better than Large Cities across the country (with a population over 250,000 ) by 6 points. The average score for Boston's $8^{\text {th }}$ graders was the same as that of Large Cities and was 9 points lower than the national average, but the difference was not statistically significant.
- Of the 21 participating TUDA districts, Boston was one of eight to have a score significantly higher than, or equal to, that of Large Cities in both the grade 4 and grade 8 reading assessments.
- Compared to other TUDA districts, Boston's average scores in both grades 4 and 8 were higher than or equal to those of 15 other districts. Only five districts (Austin, Charlotte, Hillsborough, Jefferson, and Miami-Dade) scored higher than Boston in both test grades.

## Performance by Racial/Ethnic Group:

- Between 2003 and 2011, all but the Asian student group made statistically significant gains in their average scores on the $4^{\text {th }}$ grade test. White students' average increased 16 points; Black students saw a 9-point gain; and Hispanic students experienced a 13point gain.
- The gains made by Boston’s 8th grade students between 2003 and 2011 are not statistically significant for any ethnic group.
- In Boston, the gaps in performance between Asian/White students and Black/Hispanic students persist in both 4th and 8th grade.
- However, Boston’s Black students outperformed their peers across the nation: 4th graders in Boston had an average score of 211, compared to the national average of 205. Similarly, Black students in Boston outscored their peers in Large Cities by 9 points. Overall, Boston's Black students had the third highest scale score of all TUDA districts in 4th grade; in $8^{\text {th }}$ grade, only Charlotte had a significantly higher average score.
- Boston's Hispanic students in $4^{\text {th }}$ grade also had higher average scores than Hispanic students across the Nation and in Large Cities. Boston's $8^{\text {th }}$ grade Hispanic students also performed significantly better than their peers across the Nation. Compared to other TUDA districts, Boston's Hispanic $4^{\text {th }}$ and $8^{\text {th }}$ graders performed as well as or significantly better than all other districts, with two exceptions (Miami-Dade and Hillsborough County).

## Low-Income Students:

- In grade 4, low-income students in Boston scored significantly higher than the Nation (by 5 points) and Large Cities (by 8 points). Boston's average was also the fourth highest among TUDA districts and was only significantly exceeded by Hillsborough County.
- Among 8th graders, the performance of Boston's low-income students was comparable to the national average and the Large City average. Compared to other TUDA districts, only two had a significantly higher average score (Miami-Dade and Hillsborough County).

## Students with Disabilities:

- Students with disabilities in Boston outperformed their peers in Large Cities in grade 4; in grade 8, they had the same average score as their peers in Large Cities. In both grades, students with disabilities in Boston perform as well as their peers nationally. Compared to other TUDA districts, only one had a higher average score in both grades (Hillsborough County).

## English Language Learners:

- Boston's English Language Learners (ELLs) in $4^{\text {th }}$ grade scored higher than the national average and higher than their peers in Large Cities; none of the TUDA districts scored significantly higher than Boston.
- ELL students in 8th grade performed as well as their peers across the Nation and in Large Cities. Boston's ELL average was lower than that of 8 TUDA districts, but only Hillsborough County's and Detroit's scores were significantly better.

## Performance by Achievement Level:

- In 2011, $62 \%$ of Boston's 4th grade students scored at the basic level or above on the reading assessment. Only three TUDA districts had a higher percentage. Boston's performance was also better compared to Large Cities (55\%) but lower than the Nation (66\%).
- In grade 8, the percentage of students in Boston who performed at or above Basic was $63 \%$, statistically surpassing or equaling the rates of 15 TUDA districts and Large Cities (65\%). However, Boston's rate was lower than that of 5 districts and the Nation (75\%)..
- In grade 4, Boston made significant improvements in the percentage of students performing at or above Proficient since 2003, with a 10-points increase, compared to 5 points for Large Cities. However, the percentage proficient/advanced in $8^{\text {th }}$ grade remained unchanged across the five assessment years, compared to a significant 4 point increase for Large Cities since 2003.

## Performance by Percentile Rank:

- Boston's $4^{\text {th }}$ graders saw a significant and steady improvement since 2003 across all but the lowest quintile. In particular, students performing at the $25^{\text {th }}$ and $50^{\text {th }}$ percentile have made significant gains in the first three NAEP administrations in reading since 2003. By contrast, there have been no significant gains experienced by $8^{\text {th }}$ grade students in any of the quintiles since the 2003 administration.

## Mathematics

## Boston's Performance over Time:

- Boston’s average scores in both grades 4 and 8 have continued to increase or remain constant each year since the district first participated in NAEP/TUDA in 2003.
- In grade 4, though Boston did not see a significant scale score gain since 2009, its gain since 2003 is impressive, totaling 17 points and surpassing the 6-point gain nationally, and 9-point gain experienced by Large Cities. The performance gap with Nation is also significantly smaller (3 points). In 2003, Boston’s performance compared to Large Cities was significantly lower: that trend was reversed in 2005 and Boston continues to outperform Large Cities.
- Boston's $8^{\text {th }}$ grade students also experienced significant gains since 2003: the 2011 score was up 20 points, compared to a 7-point increase nationally and a 12-point increase for Large Cities.

## Boston's Performance Compared to other TUDA Districts, Large Cities, and the Nation:

- While Boston's average scores were lower than the Nation in both grades 4 and 8 (3points in grade 4 and 1 point in grade 8 ), the district performed significantly better than Large Cities: the average score was 6 points higher in grade 4 , and 8 points higher in grade 8.
- Of the 21 participating TUDA districts, Boston was one of only six to score significantly higher than Large Cities in both grades 4 and 8.
- Compared to other TUDA districts, Boston's average scores in both grades 4 and 8 were higher than or equal to those of 17 other districts. Only two districts (Austin, and Charlotte) scored higher than Boston in both grades; and one district (Hillsborough County) scored higher than Boston in grade 4.

## Performance by Racial/Ethnic Group:

- From 2003 to 2011, students in all racial groups made statistically significant gains in their average scores on the $4^{\text {th }}$ grade test. Black students saw a 14 -point gain while Asian, Hispanic, and White students experienced 16-point, 19-point, and 21-point gains respectively.
- The gains made by Boston's $8^{\text {th }}$ grade students between 2003 and 2011 were also statistically significant across all ethnic groups: improvements ranged from 16 points for White students, to 21 points for Black students.
- Despite consistent performance gains for students of all ethnic backgrounds, the gaps in performance between Boston's Asian/White students and Black/Hispanic students persist in both $4^{\text {th }}$ and $8^{\text {th }}$ grade.
- However, in both grades 4 and 8, Boston’s Black students significantly outperformed their peers across the nation and in Large Cities. Importantly, Boston's Black students had the highest scale scores of all TUDA districts in $8^{\text {th }}$ grade.
- Boston's Hispanic students in $4^{\text {th }}$ grade also had higher average scores than Hispanic students across the Nation and in Large Cities. Compared to other TUDA districts, Boston's Hispanic $4^{\text {th }}$ and $8^{\text {th }}$ graders performed as well as or significantly better than all other districts, with only one exception (Houston) in grade 8, and two districts (Hillsborough County and Charlotte) in grade 4.

## Low-Income Students:

- In grade 4, low-income students in Boston scored significantly higher than the Nation (by 5 points) and Large Cities (by 7 points). Boston's average was also the second highest (tied with Hillsborough County) among TUDA districts, and not significantly different from Austin's and Charlotte's.
- Among $8^{\text {th }}$ graders, the performance of Boston's low-income students was the second highest of all TUDA districts; higher than the Nation; and higher than the Large City average.

## Students with Disabilities:

- In both $4^{\text {th }}$ and $8^{\text {th }}$ grade, students with disabilities in Boston outperformed their peers in Large Cities. Their average score was not significantly different form the national average. Boston's special education students also performed better than most TUDA districts. In particular, Boston's $8^{\text {th }}$ grade students with disabilities had the second highest score among all TUDA districts, the Nation, and Large Cities.

## English Language Learners:

- Boston’s English Language Learners (ELLs) in both 4th and 8th grade scored significantly higher than their peers across the Nation and in Large Cities. None of the 18 TUDA districts with a sufficiently large ELL student sample had significantly higher averages than Boston's.

## Performance by Achievement Level:

- In 2011, 81\% of Boston's 4th grade students scored at the basic level or above on the math assessment. Only three TUDA districts had a higher percentage. Boston's performance was also better than Large Cities (74\%), and not statistically different from the Nation (82\%).
- In grade 8, the percentage of students in Boston who performed at or above Basic was 69\%, higher than Large Cities (63\%) but 3 points lower than the Nation (72\%).
- The percentage of Boston students scoring at or above Proficient in 2011 in both grades 4 and 8 was comparable to or significantly higher than that of Large Cities, and lower than just four TUDA districts.
- In both grades Boston made significant improvements in the percentage of students performing at or above Proficient since 2003. Boston also saw a significant improvement in grade 8 from 2007 to 2011, with a 7 -point increase. Since 2003, the percentage of $4^{\text {th }}$ graders who are proficient/advanced increased 21 points, compared to 10 points for large cities; and the percentage proficient/advanced in $8^{\text {th }}$ grade increased 17 points, compared to 10 points for Large Cities.

## Performance by Percentile Rank:

- Boston's $4^{\text {th }}$ and $8^{\text {th }}$ graders have experienced significant gains since 2003 across all quintiles. However, there have been no significant gains for any quintile in any grade since 2009.
(Intentionally left blank)

Developed in 1969, the National Assessment of Educational Progress (NAEP), also referred to as the Nation's Report Card, is the largest nationally representative assessment of what America's students know and can do. It provides a common yardstick for measuring the progress of students' education across the country. While each state has its own unique assessment, NAEP asks the same questions in every state, making state comparisons possible.

In 2001, following discussions between the National Center for Education Statistics (NCES), the National Assessment Governing Board (NAGB), and the Council of the Great City Schools (CGCS), Congress appropriated funds for district-level assessments on a trial basis, similar to the trial for state assessments that began in 1990. As a result, the NAGB passed a resolution approving the selection of urban districts for participation in the Trial Urban District Assessment (TUDA), a special project within NAEP that would make assessment results available at the district level. Representatives of the Council of Great City Schools worked with the staff of NAGB to identify districts to be invited for the trial assessment. Districts were selected based on a number of characteristics, including size, minority concentrations, federal program participation, socioeconomic conditions, and percentages of students with disabilities (SD) and English Language Learners (ELL).

In 2002, five urban school districts participated in NAEP's first Trial Urban District Assessment (TUDA) in reading and writing. In 2003, ten urban districts (including the original five) participated in the TUDA program in reading and mathematics in grades 4 and 8: Atlanta, Boston, Charlotte-Mecklenburg, Chicago, Cleveland, Houston, Los Angeles, New York City, San Diego, and Washington, D.C. (District of Columbia Public Schools-DCPS). In 2005, Austin was added to the group of school systems that participated in the reading, math and science testing. These eleven large urban school districts continued participating in TUDA in 2007. In 2009, seven more districts (Baltimore City, Detroit, Fresno Unified, Jefferson County (KY), Miami-Dade County, Milwaukee, and Philadelphia) joined the TUDA project. For 2011, twenty-one districts, with three new additions (Albuquerque, Dallas and Hillsborough County-FL), were invited by the NAGB to participate in mathematics and reading TUDA assessments at grades 4 and 8 and Science at grade 8.

It should be noted that since 2009, in addition to public-school students, the sampled charter schools were included in the NAEP TUDA results if they were also included in a district’s Adequate Yearly Progress (AYP) reports. Additionally, the "Large Cities (LC)" designation refers to public schools located in urban areas with populations of 250,000 or more (as defined by NCES). Comparisons between national, district, and large city results are limited to public school students. In NAEP reports, the category "Nation (public)" does not include Department of Defense or Bureau of Indian Education schools. It should also be noted that among the TUDA districts, ten of the twenty-one consist entirely of schools in cities with a population of 250,000 or more; eleven of them however - Albuquerque, Atlanta, Austin, Charlotte, Cleveland, Dallas, Fresno, Hillsborough (FL), Houston, Jefferson County, Los Angeles and Miami-Dade - also include a number of fourth and eighth grade students enrolled in surrounding suburban or rural areas. Results for these districts include data from all students, both urban and suburban/rural, a fact that
must be kept in mind when comparing their performance to other districts, large cities, or the nation.

This report provides results for Boston's public school students in grades 4 and 8 from the National Assessment of Educational Progress (NAEP) assessment in Reading and in Mathematics. Results are reported by average scale score (reported on a 0-500 scale), and by achievement levels (Basic, Proficient, and Advanced).

An overview of the Reading and Math assessment frameworks is included in Appendix A. Appendix B provides in-depth comparisons of the NAEP and MCAS assessment designs, reporting, and formats. Appendix C presents sample questions from the 2011 fourth and eighth grade NAEP assessments.

## 2011 NAEP READING

## READING: DEMOGRAPHIC CONTEXT

The charts below display the percentage of students who participated in the 2011 TUDA NAEP Reading test by their racial/ethnic identification, disability (SD), English Language Learner (ELL) status, and Low-Income status. The charts display not only Boston's participation rates, but also the Nation's and Large Cities', as well as the TUDA minimums and maximums.

Boston's percentages of Black and Hispanic students in both grades 4 and 8 fall in the middle range of the other TUDA districts. However, almost $80 \%$ of students in Boston receive a free/reduced-price lunch, far larger than the national average (about 50\%) and Large Cities (about 70\%). Boston also has very high participation rates for students with disabilities and English Language Learners, particularly at grade 4, compared to other TUDA districts. These differences are important to consider in comparing results across jurisdictions.

In addition, because results are based on samples rather than entire populations, examining statistical significance is essential in determining differences across groups.

Grade 4 Reading Demographic Characteristics:

Grade 8 Reading Demographic Characteristics:

## (1) Average Reading Scale Scores Over Time: 2003-2011

Grade 4

- Boston's $4^{\text {th }}$ grade reading average score in 2011 was significantly higher than in the first three administrations of the NAEP, from 2003 to 2007.
- While the Nation's average score remained unchanged since 2007, Boston’s average scale score in 2011 was up 7 points (217), a significant gain since 2007. Boston's gain since 2003 is even more impressive, totaling 11 points and significantly surpassing the 4 -point gain nationally and 7 -point gain experienced by large cities, indicating Boston's $4^{\text {th }}$ graders have experienced a higher growth in reading performance resulting in a significantly narrower gap with the Nation.
- Although Boston's performance in 2011 was 3 points lower than the national average, it was significantly better compared to Large Cities*.

[^0]
## Grade 8

- Boston's $8^{\text {th }}$ grade students had an average score of 255, the same as that of Large Cities; it was 9 points lower than the national average, but the difference was not statistically significant.
- Boston's $8^{\text {th }}$ grade average score in 2011 was not significantly different from any of the four previous administrations; by contrast, the national and Large City averages have increased significantly since 2003 (3 points nationally and 6 points in Large Cities).

## (2) 2011 Reading Scale Score Comparisons Across Jurisdictions Large City vs. TUDA Districts

2011 Average Scale Score Comparisons - Large City (LC) vs TUDA Districts

Relative to each district listed at the top of the figure:

- That Distict had significanty ( $\mathrm{P}<.05$ ) higher average scale soore than Large aity
$=$ : No significant difference bemeen that District and Large City
- That District had significantly ( $\mathrm{P}<.05$ ) lower average scale score than Large City
- Of the 21 participating TUDA districts, Boston was one of eight to score significantly higher than the Large City average in grade 4 ; in grade 8 , Boston's score equaled the Large City average.

Boston's scale scores for all students as well as for student subgroups are provided in Appendix D. Scale scores for all TUDA districts are provided in appendix E.

Boston vs. TUDA Districts

2011 Average Scale Score Comparisons - Boston vs TUDA Districts

```
Relative to each district listed at the top of the figure:
1- Boston had significantly ( \(\mathrm{P}<.05\) ) higher average scale score than that District
= : No significant difference between Boston and that District
: Boston had significantly ( \(\mathrm{P}<.05\) )lower average scale score than that District
```

- In addition to its higher scores compared to Large Cities, Boston's performance stands out in comparison to other TUDA districts: in both grades 4 and 8, Boston scored higher than or equal to all but five districts (Austin, Charlotte, Hillsborough, Jefferson, and Miami-Dade).

## (3) Average Reading Scale Scores by Race/Ethnicity

Grade 4: 2003-2011

- Compared to 2009, the average scores for White and Hispanic students rose 10 and 5 points respectively; Asian and Black students saw a 5 and 1 point drop respectively, although these changes were not statistically significant.
- From 2003 to 2011, White, Hispanic, and Black students have experienced statistically significant gains, with 16, 13, and 9-point gains respectively. Asian students have also seen a 3-point increase in that period, though the change was not statistically significant.

Boston's Grade 8 Students: 2003-2011

- Reading scores for Boston's $8^{\text {th }}$ grade students between 2009 and 2011 declined for all ethnic groups except for Asian students, who saw a 2 point gain. Though not statistically significant, the drops ranged from 1 point for White students, to 6 points for Hispanic students. Since 2003, no racial group has experienced a statistically significant gain on the $8^{\text {th }}$ grade Reading test.
- The gaps in performance between Boston’s White/Asian students and Black/Hispanic students persist in both $4^{\text {th }}$ and $8^{\text {th }}$ grade.
Appendix F provides detailed information on the performance of students by racial group.

## Boston's Black Students Compared to the Nation, Large Cities, and other TUDA Districts

Grade 4 Black Students
2011 Reading Average Scale Score Comparisons Boston and Nation, Large City \& TUDA Districts

* Significantly different ( $\mathrm{P}<.05$ ) from Boston.
- Despite continued disparity in the performance of Black students compared to their White and Asian peers, the district's Black students outperformed their peers across the nation: $4^{\text {th }}$ graders in Boston had an average score of 211, compared to the national average of 205. Similarly, Black students in Boston had an average score 9 points higher than the average for Large Cities. Boston's average score for Black students was also the third highest among the TUDA districts and not significantly different from that of Austin, but significantly lower than Hillsborough County's.

Grade 8 Black Students
2011 Reading Average Scale Score Comparisons Boston and Nation, Large City \& TUDA Districts

- In Grade 8, the performance of Boston’s Black students was about the same as their peers across the Nation and in Large Cities. Among the TUDA districts, Boston's Black students performed as well as or significantly better than all other districts, with only one exception (Charlotte).

## Boston's Hispanic Students Compared to the Nation, Large Cities, and other TUDA Districts

Grade 4 Hispanic Students
2011 Reading Average Scale Score Comparisons Boston and Nation, Large City \& TUDA Districts

- Boston's Hispanic students in $4^{\text {th }}$ grade also had higher average scores (214) than Hispanic students across the Nation (205) and in Large Cities (203). Among the participating TUDA districts, only Miami-Dade and Hillsborough County's Hispanic $4^{\text {th }}$ graders scored significantly higher than Boston's.

Grade 8 Hispanic Students
2011 Reading Average Scale Score Comparisons Boston and Nation, Large City \& TUDA Districts

- In Grade 8, Boston’s Hispanic students performed as well as their peers in Large Cities but significantly lower than Hispanic students across the Nation. Among TUDA districts with a sufficiently large sample of Hispanic students, four districts outperformed Boston (Chicago, Charlotte, Hillsborough County and MiamiDade).

## (4) Average Reading Scale Scores for Other Student Groups Students Eligible for Free/Reduced Lunch

Grade 4 Low-Income Students
2011 Reading Average Scale Score Comparisons Boston and Nation, Large City \& TUDA Districts

- In grade 4, low-income students in Boston scored significantly higher than the Nation (by 5 points) and Large Cities (by 8 points). Boston's average was also the fourth highest among the TUDA districts and was only significantly exceeded by Hillsborough County.

Grade 8 Low-Income Students
2011 Reading Average Scale Score Comparisons Boston and Nation, Large City \& TUDA Districts

- Among $8^{\text {th }}$ graders, Boston's low-income students performed as well as their peers across the Nation and in Large Cities. Compared to other TUDA districts, only Hillsborough County and Miami-Dade had a significantly higher average.

## Students with Disabilities

Grade 4 Students with Disabilities
2011 Reading Average Scale Score Comparisons Boston and Nation, Large City \& TUDA Districts

- In $4^{\text {th }}$ grade, students with disabilities in Boston outperformed their peers in Large Cities. Their average score was not significantly different form the national average. Boston's special education students performed equally well or better than all but one district (Hillsborough County).

- In Grade 8, the average score for students with disabilities in Boston was not significantly different from the national average or Large Cities. Compared to other TUDA districts, only one district had a higher average.

## English Language Learners

Grade 4 English Language Learners
2011 Reading Average Scale Score Comparisons Boston and Nation, Large City \& TUDA Districts

- Boston's $4^{\text {th }}$ grade English Language Learners (ELLs) outperformed their peers across the Nation and in Large Cities. Compared to other TUDA districts, Boston's average score was statistically equal to the highest score.

Grade 8 English Language Learners
2011 Reading Average Scale Score Comparisons Boston and Nation, Large City \& TUDA Districts

- The average score for ELL students in $8^{\text {th }}$ grade was comparable to that of their peers in Large Cities and across the Nation. Boston's ELL average was statistically lower than just two districts (Hillsborough County and Detroit).

## (5) Reading Performance by Achievement Level: Boston vs. Nation, Large

 Cities, and TUDA Districts
## Grade 4 Reading Percentage of Students Scoring at or Above Basic:

\# Estimate rounds to zero.
NOTE: Detail may not sum to totals because of rounding.

- In 2011, $62 \%$ of Boston's $4^{\text {th }}$ grade students scored at or above the basic level on the Reading assessment. This percentage was significantly higher than or equal to that in all but three other TUDA districts. Boston's performance was significantly lower than the national average (66\%). However, a higher percentage of Boston students performed at the Basic level or above compared to students in Large Cities (55\%).

## Grade 8 Reading Percentage of Students Scoring at or Above Basic:

\# Estimate rounds to zero.
NOTE: Detail may not sum to totals because of rounding.

- In grade 8, the percentage of students in Boston who performed at or above Basic (63\%) was significantly higher than or equal to 15 other TUDA districts and Large Cities (65\%). Boston’s percentage was significantly lower compared to the Nation (75\%) and five other TUDA districts.

## Reading Percentage of Students Scoring at or Above Proficient 2011 Performance

Percentage of Students Scoring at or Above Proficient in 2011 Reading: Boston vs. TUDA Districts

Relative to each district listed at the top of the figure:

- : Boston had significantly higher percentage of students scored in Proficient and Advanced than that District
= : No significant difference between Boston and that District
- : Boston had significantly lower percentage of students scored in Proficient and Advanced than that District
- In 2011, Boston’s $4^{\text {th }}$ grade proficient/advanced rate (26\%) was significantly higher than that of ten TUDA districts. Boston's rate was about the same as that of Large Cities, and lower than that of five districts (Austin, Charlotte, Hillsborough, Jefferson, Miami-Dade and San Diego).
- Boston's $8^{\text {th }}$ graders performed about the same as their peers in Large Cites with a proficient/advanced rate of $24 \%$. Compared to all the other TUDA districts, Boston's performance was lower than just three districts (Austin, Charlotte and Hillsborough).

Performance Over Time: 2003-2011
Percentage of Students Scoring at or Above Proficient in Reading, 2003-2011

|  | Grade 4 |  |  |  |  | Grade 8 |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

[^1]** Significantly different ( P < .05) from 2011.

- The percentage of students scoring at or above Proficient in reading in 2011 for Boston was comparable to that of Large Cities in both grades 4 and 8.
- In grade 4, Boston made significant improvements in the percentage of students performing at or above Proficient since 2003 (10-point gain for Boston, compared to a 5 -point gain for Large Cities). However, the percentage of Boston's $8^{\text {th }}$ graders scoring at or above Proficient in 2011 was about the same as that in the previous four assessment years; by contrast, the Large Cities rate increased by 4 points.

## (6) Reading Performance by Percentile Rank

Grade 4

- Among Boston's $4{ }^{\text {th }}$ graders, significant improvements were observed since 2003 and 2005 for students at all quintiles, except for those in the lowest $10^{\text {th }}$ percentile: here, the 8 -point gain since 2003 is not statistically significant.

## Grade 8

- For $8^{\text {th }}$ graders, there have been no statistical gains for students at any quintile compared to 2003.

## 2011 NAEP MATHEMATICS

## MATHEMATICS: DEMOGRAPHIC CONTEXT

The charts below display the percentage of students who participated in the 2011 TUDA NAEP Math test by their racial/ethnic identification, disability, English Language Learner status, and Low-Income status. The charts display not only Boston's participation rates, but also the Nation's and Large Cities', as well as the TUDA minimums and maximums.
In both grades 4 and 8 , Boston's percentages for Black and Hispanic students fall in the middle range of the other TUDA districts. However, about $80 \%$ of students in Boston receive a free/reduced-price lunch, far larger than the national average (about $50 \%$ ) and higher than Large Cities (about 70\%). Compared to other TUDA districts, the participation rates of English Language Learners are also very high for Boston. Boston also has the highest participation rates for students with disabilities in grade 4 compared to other TUDA districts. These differences are important to consider in comparing results across jurisdictions.
In addition, because results are based on samples rather than entire populations, examining statistical significance is essential in determining differences across groups.

## Distribution of Selected Student Groups for TUDA Districts

Grade 4 Mathematics Demographic Characteristics:

Grade 8 Mathematics Demographic Characteristics:

## (2) Average Mathematics Scale Scores Over Time: 2003-2011

## Grade 4

- Boston’s average score in 2011 was significantly higher than in the first three administrations of the NAEP, beginning in 2003.
- Boston has made an impressive gain since 2003, totaling 17 points and surpassing the 6 -point gain nationally, as well as the 9 -point gain experienced by Large Cities.
- Although Boston's performance in 2011 was 3 points lower than the national average, it was significantly better compared to Large Cities*.

[^2]
## Grade 8

- In 2011, Boston's $8^{\text {th }}$ grade students had an average score significantly higher (8 points) than the average for Large Cities and not significantly different from the national average.
- Boston's $8^{\text {th }}$ grade average score in 2011 was significantly higher than in the first three administrations, with a 20-point gain since 2003 (compared to a 7-point increase nationally and a 12-point increase for Large Cities).
- Since 2003, the math performance of Boston's $8^{\text {th }}$ graders has steadily increased, surpassing the large City gains and almost eliminating the gap with the Nation.

## Large City vs TUDA Districts

2011 Average Scale Score Comparisons - Large City (LC) vs TUDA Districts

Relative to each district listed at the top of the figure:

1. That Distict had significantly ( $\mathrm{P}<.05$ ) higher average scale score than Large City
= : No significant difference between that District and Large City
: That District had significantly $(\mathrm{P}<.05)$ lower average scale score than Large City

- Of the 21 participating TUDA districts, Boston was one of only six to score significantly higher than Large Cities in both grades 4 and 8.

Boston's scale scores for all students as well as for student subgroups are provided in Appendix D. Scale scores for all TUDA districts are provided in appendix E.

## Boston vs. TUDA Districts

Relative to each district listed at the top of the figure:

- : Boston had significantly ( $\mathrm{P}<.05$ ) higher average scale score than that District
= : No significant difference between Boston and that District
: Boston had significantly ( $\mathrm{P}<.05$ )lower average scale score than that District
- In addition to its higher scores compared to Large Cities, Boston’s performance stands out in comparison to other TUDA districts: in both grades 4 and 8 , average scale scores were higher than or equal to all except three districts. Charlotte and Austin scored higher than Boston in both grades 4 and 8 Mathematics; Hillsborough scored higher in grade 4.

## (3) Average Mathematics Scale Scores by Race/Ethnicity

Grade 4: 2003-2011

- From 2003 to 2011, students in all racial groups made statistically significant gains in their average scores on the $4^{\text {th }}$ grade test. Black students saw a 14 -point gain, while Asian, Hispanic, and White students experienced 16, 19, and 21-point gains respectively. The performance gaps between Asian/White and Hispanic/Black students remain unchanged.

Grade 8: 2003-2011

- Gains made by Boston's $8^{\text {th }}$ grade students between 2003 and 2011 were also statistically significant across all ethnic groups: improvements ranged from 16 points for White students, to 21 points for Black students.

Appendix F provides detailed information on the performance of students by racial group.

## Boston's Black Students Compared to the Nation, Large Cities, and other TUDA Districts

Grade 4 Black Students
2011 Mathematics Average Scale Score Comparisons Boston and Nation, Large City \& TUDA Districts

* Significantly different ( $\mathrm{P}<.05$ ) from Boston.
$\ddagger$ Reporting standard not met. Sample size insufficient to permit a reliable estimate.
- Despite continued disparity in the performance of Black students compared to their White and Asian peers, the district's Black students outperformed their peers across the nation: $4^{\text {th }}$ graders in Boston had an average score of 230, compared to the national average of 224. Similarly, Black students in Boston had an average score 18 points higher than the average for Large Cities. Compared to the TUDA districts, Boston's black students performed better than 15 jurisdictions and were not significantly surpassed by any.

Grade 8 Black Students
2011 Mathematics Average Scale Score Comparisons Boston and Nation, Large City \& TUDA Districts

* Significantly different ( $\mathrm{P}<.05$ ) from Boston.
$\ddagger$ Reporting standard not met. Sample size insufficient to permit a reliable estimate.
- In Grade 8, Boston’s black students again outperformed their peers across the Nation and in Large Cities. Importantly, Boston's Black students had the highest scale score of any TUDA district.

## Boston's Hispanic Students Compared to the Nation, Large Cities, and other TUDA Districts

Grade 4 Hispanic Students
2011 Mathematics Average Scale Score Comparisons Boston and Nation, Large City \& TUDA Districts

Significantly different ( $\mathrm{P}<.05$ ) from Boston
$\ddagger$ Reporting standard not met. Sample size insufficient to permit a reliable estimate.

- Boston's Hispanic students in $4^{\text {th }}$ grade also had higher average scores (234) than Hispanic students across the Nation (229) and in Large Cities (228). Compared to other TUDA districts, Boston's Hispanic $4^{\text {th }}$ graders performed as well as or significantly better than most other districts, with only Hillsborough and Charlotte showing significantly higher scores.

Grade 8 Hispanic Students
2011 Mathematics Average Scale Score Comparisons Boston and Nation, Large City \& TUDA Districts

* Significantly different ( $\mathrm{P}<.05$ ) from Boston.
$\ddagger$ Reporting standard not met. Sample size insufficient to permit a reliable estimate.
- In Grade 8, Boston’s Hispanic students performed as well as their national peers and Hispanic students in Large Cities. Among TUDA districts, only Houston’s Hispanic student group had a significantly higher average than Boston's.

## (4) Average Mathematics Scale Scores for Other Student Groups Students eligible for Free/Reduced Lunch

Grade 4 Low-Income Students
2011 Mathematics Average Scale Score Comparisons Boston and Nation, Large City \& TUDA Districts

- In grade 4 , low-income students in Boston scored significantly higher than the Nation (by 5 points) and Large Cities (by 7 points). Boston’s average was also the second highest (tied with Hillsborough) among the TUDA districts and not significantly different from Austin's and Charlotte's (both scored 235).

Grade 8 Low-Income Students
2011 Mathematics Average Scale Score Comparisons Boston and Nation, Large City \& TUDA Districts

- Among $8^{\text {th }}$ graders, the performance of Boston's low-income students was not only significantly higher than the Nation and the Large City average, but was also higher than all TUDA districts with only one exception (Houston’s score was 1 point higher, although the difference was not statistically different).

## Students with Disabilities

Grade 4 Students with Disabilities
2011 Mathematics Average Scale Score Comparisons Boston and Nation, Large City \& TUDA Districts

- In $4^{\text {th }}$ grade, students with disabilities in Boston outperformed their peers in Large Cities. Their average score was not significantly different form the national average. Boston's special education students also performed better than most TUDA districts, scoring significantly lower than only two districts, Austin and Hillsborough.

Grade 8 Students with Disabilities 2011 Mathematics Average Scale Score Comparisons Boston and Nation, Large City \& TUDA Districts

- In $8^{\text {th }}$ grade, students with disabilities in Boston outperformed their peers in Large Cities. Their average score was not significantly different form the national average. Boston’s average for special education students was also the second highest among the TUDA districts and not significantly different from Hillsborough's.

## English Language Learners

Grade 4 English Language Learners 2011 Mathematics Average Scale Score Comparisons Boston and Nation, Large City \& TUDA Districts

- Boston's English Language Learners (ELLs) had an average scale score in $4^{\text {th }}$ grade higher than the national average and higher than their peers in Large Cities. Compared to other TUDA districts, none of the 18 districts with a sufficiently large ELL sample had significantly higher averages than Boston's.

- ELL students in $8^{\text {th }}$ grade had an average score that was significantly higher than that of their ELL peers across the nation and in the Large Cities. Boston's ELL average was statistically equivalent to the highest among TUDA districts.

## (5) Mathematics Performance by Achievement Level: Boston vs. Nation, Large Cities, and TUDA Districts

Grade 4 Mathematics Percentage of Students Scoring at or Above Basic:

\# Estimate rounds to zero.
NOTE: Detail may not sum to totals because of rounding.

- In 2011, $81 \%$ of Boston's $4^{\text {th }}$ grade students scored at the basic level or above on the math assessment. This percentage was significantly higher than or equal to that in all but three other TUDA districts. Boston's performance was not significantly different from the Nation overall (82\%). However, a higher percentage of Boston students performed at the Basic level or above compared to students in Large Cities (74\%).

## Grade 8 Mathematics Percentage of Students Scoring at or Above Basic:

- In grade 8, the percentage of students in Boston who performed at or above Basic (69\%) was significantly higher compared to 15 other TUDA districts, as well as Large Cities (63\%). Boston's rate was significantly lower only as compared to Austin (74\%) and the Nation (72\%).

# Mathematics Percentage of Students Scoring at or Above Proficient 2011 Performance 

Percentage of Students Scoring at or Above Proficient in 2011 Mathematics: Boston vs. TUDA Districts

Relative to each district listed at the top of the figure:
: Boston had significantly higher percentage of students scored in Proficient and Advanced than that District
= : No significant difference between Boston and that District

- Boston had significantly lower percentage of students scored in Proficient and Advanced than that District
- In 2011, Boston’s $4^{\text {th }}$ grade proficient/advanced rate (33\%) was significantly higher than that of 11 TUDA districts. Boston's rate was about the same as that of Large Cities.
- Boston's $8^{\text {th }}$ graders performed significantly better than students in Large Cities, with a proficient/advanced rate of $34 \%$. Compared to all the other TUDA districts, Boston's performance was second only to Austin's.

## Performance Over Time: 2003-2011

Percentage of Students Scoring at or Above Proficient in Mathematics, 2003-2011

|  | Grade 4 |  |  |  |  | Grade 8 |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 2003 | 2005 | 2007 | 2009 | 2011 | 2003 | 2005 | 2007 | 2009 | 2011 |

| Dallas |  |  |  |  | 25 | -- | -- | -- | -- | 22* |
| Detroit | -- | -- | -- | 3 | 3* | -- | -- | -- | 4 | 4* |
| District of Columbia | 7** | 10** | 14** | 19** | 23* | 6** | 7** | 8** | 12** | 15* |
| Fresno | -- | -- | -- | 14 | 15* | -- | -- | -- | 15 | 13* |
| Hillsborough Cnty (FL) | -- | -- | -- | -- | 43* | -- | -- | -- | -- | 32* |
| Houston | 18** | 26** | 28** | 30 | 32 | 12** | 16** | 21** | 24 | 27 |
| Jefferson County | -- | -- | -- | 31 | 32 | -- | -- | -- | 22 | 25 |
| Los Angeles | 13** | 18 | 19 | 19 | 20* | 7** | 11** | 14 | 13 | 16* |
| Miami-Dade | -- | -- | -- | 33 | 33 | -- | -- | -- | 22 | 22* |
| Milwaukee | -- | -- | -- | 15 | 14* | -- | -- | -- | 7 | 10* |
| N.Y.C. | 21** | 26** | 34 | 35 | 32 | 20 | 20 | 22 | 26 | 24 |
| Philadelphia | -- | -- | -- | 16 | 20* | -- | -- | -- | 17 | 18* |
| San Diego | 20** | 29** | 35 | 36 | 39* | 18** | 22** | 24** | 32 | 31* |

[^3]** Significantly different ( P < .05) from 2011.

- The percentage of students scoring at or above Proficient in mathematics in 2011 for Boston was higher than that for Large Cities in both grades (3 percentage points in grade 4 and 8 percentage points in grade 8 ); however, only the grade 8 performance was statistically significant.
- For both grades 4 and 8, Boston made significant improvements in the percentage of students performing at or above Proficient since 2003 and 2005. Boston also saw a significant improvement in grade 8 from 2007 to 2011, with a 7 -point increase. Since 2003, the percentage of $4^{\text {th }}$ graders who are proficient/advanced increased by 21 points, compared to 10 points for large cities; and the percentage proficient/advanced in $8^{\text {th }}$ grade increased 17 points for Boston, compared to 10 points for Large Cities.

## (6) Mathematics Performance by Percentile Rank

## Grade 4

- Among Boston's $4^{\text {th }}$ graders, significant improvements continued since 2003 and 2005 at all performance levels. Fourth graders at the $75^{\text {th }}$ and $25^{\text {th }}$ percentiles also saw significant gains since 2007, with a 4 -point and a 5-point increase, respectively. Although there were improvements between 2009 and 2011 for students at all but the lowest quintile, the increases were not statistically significant.

## Grade 8

- Among Boston's $8^{\text {th }}$ graders, significant improvements continued since 2003 at all performance levels. Eighth graders at the middle ( $50^{\text {th }}$ percentile) and highperforming levels (at the $75^{\text {th }}$ and $90^{\text {th }}$ percentile) also saw significant gains since 2007.

## APPENDIX A: Assessment Framework

The content for each NAEP assessment is determined by the National Assessment Governing Board (NAGB). The framework, which incorporates ideas and input from subject area experts, school administrators, policymakers, teachers, parents, and others, documents the specific knowledge and skill areas to be measured, and sets guidelines for the types of texts and questions to be used, as well as how the questions should be designed and scored.

## Reading

The 2011 NAEP reading assessment uses the same framework used in 2009. The reading framework includes two types of texts on the assessment: literary texts and informational texts. The framework also specifies that vocabulary knowledge will be assessed in the context of a passage. Vocabulary items function both as a measure of passage comprehension and as a test of readers’ specific knowledge of the word's meaning as intended by the passage author. The framework includes three cognitive targets, or behaviors and skills, for items from both literary and informational texts: Locate/Recall, Integrate/Interpret, and Critique/Evaluate.

The 2009 NAEP Reading Framework replaced the previous reading framework that was used from 1992 through 2007. Compared to the previous framework, the 2009 reading framework includes more emphasis on literary and informational texts, a redefinition of reading cognitive processes, a new systematic assessment of vocabulary knowledge, and the addition of poetry to grade 4.

Results from special analyses determined the 2009 reading assessment results could be compared with those from earlier assessment years. A summary of these special analyses and an overview of the differences between the previous framework and the 2009 framework are available on the Web at http://nces.ed.gov/nationsreportcard/reading/trend_study.asp.

## Mathematics

The 2011 NAEP mathematics framework, which defines the content and format for the 2011 assessment, only reflects changes in grade 12 from 2005; mathematics content objectives for grades 4 and 8 have not changed. Therefore, main NAEP trend lines from the early 1990s can continue at fourth and eighth grades for the 2011 assessment.

The mathematics framework calls for the assessment to include questions based on five mathematics content areas: 1) Number Properties and Operations; 2) Measurement; 3) Geometry; 4) Data Analysis, Statistics, and Probability; and 5) Algebra. In addition, the framework specifies that each question should measure one of three levels of mathematical complexity (refers to the cognitive demands of the item) - low, moderate, and high. By considering these two criteria (mathematical content and mathematical complexity) for each question, the framework ensures that NAEP assesses an appropriate balance of content along with a variety of ways of knowing and doing mathematics.

## Accommodations

It is NAEP's intent to assess all selected students from the target population. Beginning in 2002, students with disabilities and English language learners who require accommodations have been permitted to use them in NAEP, unless a particular accommodation would alter the skills and knowledge being tested. For example, calculators are not permitted on non-calculator sections of the NAEP mathematics test for students who would otherwise require non-standard accommodations provided on state assessment. The table below shows the comparisons of frequently provided accommodations for Students with Disabilities (SD) and English Language Learners (ELL) between Massachusetts and the NAEP.

## Comparisons of Frequently Provided Accommodations for Students with Disabilities (SD) and English Language Learners (ELL) <br> MA vs. NAEP

| Accommodations | Reading |  |  |  | Math |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Spanish/English version of the test | No | No | No | No | No | No | Yes | Yes |

## Population Tested

Results from the 2003, 2005, 2007, 2009, and 2011 Trial Urban District Assessment are reported for the participating districts for public-school students at grades 4 and 8. The TUDA assessment employed larger-than-usual samples within the districts, making reliable district-level data possible. The samples were also large enough to provide reliable estimates on subgroups within the districts, such as female students or Hispanic students. Because students were sampled, all analyses are examined for statistical significance.

In Boston, students from 80 schools at grade 4 and 40 schools at grade 8 participated in the 2011 NAEP assessments. A total of 2,900 students were assessed in mathematics ( 1,700 at grade 4 and 1,200 at grade 8 ), and a total of 2,800 students were assessed in Reading (1,700 at grade 4 and 1,100 at grade 8 ).

## Appendix B

## NAEP vs. MCAS

## Introduction

Under the federal No Child Left Behind Law (NCLB) and state Education Reform Law of 1993, Boston Public School students are required to participate in two testing programs: the National Assessment for Educational Progress (NAEP) and the Massachusetts Comprehensive Assessment System (MCAS). The biennial NAEP Trial Urban School District Assessment (TUDA) provides important information for understanding the effectiveness of the BPS school system relative to other large urban school districts. By contrast, the annual MCAS test provides critical information about the academic performance of BPS compared to other Mass. Public schools, as well as a measure of how well BPS students have mastered the Mass. Curriculum standards.

This appendix provides a brief comparison of MCAS with NAEP, and serves as a guide for understanding and interpreting the test results.

## Overview

## NAEP

- The National Assessment of Educational Progress (NAEP), known as the Nation's Report Card, is a Congressionallymandated assessment introduced in 1969. It includes state wide assessments since 1990, and the first Trial Urban School District Assessment (TUDA) since 2002. Based on policy set by the National Assessment Governing Board (NAGB), NAEP measures what students know and can do in key subject areas.

## Requirements for Student Participation

## Student Selection

## NAEP

- Based on sampling, a representative sample from randomly selected schools must participate in NAEP testing. For Trial District Assessment, the target sample sizes per subject per grade is 1200-1400 students. About 60 students, 30 per subject, at each participating school are tested.

## MCAS

- All Massachusetts public school students in the grades tested must take the MCAS tests.

## Page 2

## Student Participation

## NAEP

- Beginning in 2003, schools receiving Title I funding are required to participate in the biennial NAEP assessments in reading and mathematics at grades $4 \& 8$ if selected for the NAEP sample. Under NCLB, parental notification prior to testing is mandatory to inform parents of students who are sampled that their child's participation is voluntary.

## Inclusions \& Accommodations

## NAEP

Includes students with disabilities and English Language Learners (ELL) students in the assessment.

- ELL: NAEP includes all ELL students who have received instruction in English for at least three years. ELL students who have received instruction in English for less than three years are included as well unless school staff judged them to be incapable of participating in the assessment in English. In the NAEP mathematics assessment, bilingual test booklets (English and Spanish) are provided where needed.
- Students with Disabilities: Based on their IEP, students with disabilities are tested with appropriate accommodations unless the student's IEP team judges that he or she cannot participate or if NAEP does not allow an accommodation that the student requires.

## MCAS

- Every public school student is mandated to take the test. For Class of 2003 through Class of 2009, passing grade 10 ELA and Math tests is a part of the graduation requirement. Beginning with the Class of 2010, students must either achieve Proficient or Advanced on both ELA and Math tests, or pass both tests and fulfill the requirements of an Educational Proficiency Plan (EPP). Also, students must pass one of the high school MCAS Science and Technology/Engineering (STE) tests: Biology, Chemistry, Introductory Physics, or Technology/Engineering.

## MCAS

Includes students with disabilities and English Language Learners (ELL) students in the assessment.

- ELL: Beginning in 2003, the new laws, No Child Left Behind Law as well as Question 2, the Massachusetts ballot initiative approved by voters in November 2002, require that all ELL students participate in state administered academic assessments, with the sole exception of ELL students in their first year of enrollment in U.S. schools. Schools have the option of testing firstyear ELL students in ELA only.
- Students with Disabilities: The vast majority of students with disabilities take standard MCAS tests, either with or without accommodations as specified in their IEP plan. Only a very small number of students with the most significant disabilities take the MCAS Alternate Assessment.

## Test Content/Instrument Design

## Framework

## NAEP

The content and design of NAEP assessments were constructed based on the Assessment Frameworks that were developed by the National Assessment Governing Board (NAGB).

- Reading: The 2009 NAEP Reading Framework. A newly developed framework that replaces the 19922007 Framework.
- Math: The 2009 NAEP Mathematic Framework (New framework for grade 12, content objectives for grades 4 \& 8 remain the same as the 2005 framework.)

## MCAS

The content knowledge and skills tested by MCAS were based on the learning standards in the Massachusetts Curriculum Framework for the content area.

- English Language Arts: Massachusetts English Language Arts Curriculum Framework, June 2001 and May 2004 Supplement
- Math: Massachusetts Mathematics Curriculum Framework, November 2000 and May 2004 Supplement

## Content Standards Tested and Distribution of Test /tems

| NAEP |  |

## MCAS

- Every student gets the same test booklet that contains both common items and matrix sampling items. All students receive scores based on common items only.

## Type of Questions

## NAEP

- Reading/Math: Multiple-Choice, Short constructed response, and extended constructed response questions.

## Test Questions release

## NAEP

- For each subject, only selected test questions are released to the public. For current year and historical released test questions, please visit: http://nces.ed.gov/nationsreportcard/it mrls/

## Testing Administration

# 2011 NAEP <br> Same for National NAEP, State NAEP, and Trial Urban District Assessment (TUDA) NAEP 

Testing Date: 1/24/2011-3/4/2011
Testing Time (per subject): 50 minutes

## Test Grade:

- Reading - Grades 4 \& 8
- Mathematics - Grades 4 \& 8
- Science - Grade 8 (state only)

Test Administration: The NAEP
Representative from NAEP data collection contractor is responsible for all assessment activities including coordinating, conducting, and sending test materials to the scoring facility.

Test Sequence: All tests are conducted simultaneously in the same classroom; some students take Reading, other students take either mathematics or Science test.

## MCAS

- ELA Reading Comprehension: MultipleChoice, Open-response, short-response (Grade 3 only).
- English Language Arts: Multiple-Choice, Open-response, and Writing Prompts.
- Math: Multiple-Choice, short-answer, open-response items.

## MCAS

- Prior to 2009, for each subject and test grade, all common items are released to the public. Beginning in 2009 and onward only approximately $50 \%$ of common test items in grades 3-8 are released each year. For current year and historical released test items, please visit:
http://www.doe.mass.edu/mcas/testitems. html

## 2011 MCAS

Testing Date:

- ELA Composition test: 3/22/2011 (make-up 3/31/2011)
- ELA Reading Comprehension (G3-8, \& 10): 3/22/2011-4/4/2011
- Math: $5 / 10 / 2011-5 / 24 / 2011$
- Science (Grades 5 \& 8): $5 / 11 / 2011$ 5/24/2011; High School STE: 6/1/2011 - 6/2/11

Testing Time (per subject): Un-timed
Subjects \& Test Grade:

- ELA Reading Comprehension - Grades 3, 5, 6, \& 8
- English Language Arts - Grades 4, 7, \& 10
- Mathematics - Grades 3-8 \& 10
- Science \& Technology/Engineering Grades 5, 8, \& 9/10

Test Administration: School teachers/personnel are responsible for all assessment activities.

Test Sequence: All students take the same test in the same classroom.

## Scoring

## NAEP

- Short constructed-response questions are scored according to a three-level rubric:
Math: Correct, Partial, \& incorrect.
Reading: Evidence of full comprehension, Evidence of partial or surface comprehension, \& Evidence of little or no comprehension
- The extended constructed-response questions are rated based on a four-level rubric:
Math: Extended, Satisfactory, Partial, Minimal, \& Incorrect.
Reading: Extensive, Essential, Partial, \& Unsatisfactory

## Data Availability

## NAEP

- No student-level results
- No school-level results
- No district-level results (except TUDA)
- Not designed to assess a specific curriculum

## Reporting

## Performance Standard

## NAEP

## Three Achievement Levels:

- Advanced: Represents superior performance
- Proficient: Represents solid academic performance for each grade assessed
- Basic: Denotes partial mastery of prerequisite knowledge and skills that are fundamental for proficient work at each grade.

## MCAS

- Multiple-choice and short-answer questions are scored blank/0 or 1.
- Open-response questions are scored on a 0 to 4 scale based on the scoring rubrics. Grade 3 Math is scored using a 0 to 2 rubric.
- Student compositions are independently scored by two scorers on the following criteria: (1) a score of 1-6 in topic development, and (2) a score of 1-4 for the use of standard English writing conventions. Students receive the sum of the scores from each of the two readers.

## MCAS

- Student-level results
- School-level results
- District-level results
- Designed to measure the state's curriculum

## MCAS

## Four Performance Levels:

- Advanced: Students at this level demonstrate a comprehensive and indepth understanding of rigorous subject matter, and provide sophisticated solutions to complex problems.
- Proficient: Students at this level demonstrate a solid understanding of challenging subject matter and solve a wide variety of problems.
- Needs Improvement: Students at this level demonstrate a partial understanding of subject matter and solve some simple problems.
- Warning/Failing: Students at this level demonstrate a minimal understanding of subject matter and do not solve simple problems.

## Page 6

## Scaled Score

## NAEP

- Range: 0-500
- Scaled Score Corresponding to

Performance Level: vary by subject and test grade

| Reading: |  |  |
| :---: | :---: | :---: |
|  | Grade 4 | Grade 8 |
| Advanced | 268-500 | 323-500 |
| Proficient | 238-267 | 281-322 |
| Basic | 208-237 | 243-280 |
| Below Basic* | 0-207 | 0-242 |
| Mathematics: |  |  |
|  | Grade 4 | Grade 8 |
| Advanced | 282-500 | 333-500 |
| Proficient | 249-281 | 299-332 |
| Basic | 214-248 | 262-298 |
| Below Basic* | 0-213 | 0-261 |

* Below Basic is not an Achievement level
- Average scaled scores cannot be compared across grades.

## Interpreting Results

## NAEP

- The NAEP results as reported as average scores, and percentages are estimates because they are based on samples rather than the entire population(s).
- Differences in scores must be statistically significant in order to report a change.

## Additional Information

## NAEP

The Nation's Report Card (NAEP) (NCES) National Center for Education Statistics 1990 K Street, NW
Washington, DC 20006
Phone: (202) 502-7300
Web site:
http://nces.ed.gov/nationsreportcard/

## MCAS

- Range: 200-280
- Scaled Score Corresponding to Performance Level: same for all subjects and test grade

Performance Level Scaled Score
Advanced/Above Proficient $260--280$
Proficient 240-258
Needs Improvement 220-238
Warning/Failing 200-218

- Averages must be calculated from raw scores, then converted to the corresponding scaled score.

## MCAS

- Comparisons of performance on subject area subscores across years must be made with caution because the number of items contributing to each subscore is relatively small and the difficulty of the items may very somewhat from year to year.

Web site: http://www.doe.mass.edu/MCAS

## Appendix C

## Selected Sample of 2011 NAEP Questions

Because of differences in curricular emphasis, the proportion of the assessment devoted to each content area varies by grade. The following are sample released questions from the 2011 NAEP assessments (three items per test grade and subject). Additional sample questions from the NAEP reading and mathematics assessments can be found in the NAEP Questions Tool (NQT) at http://ncesed.gov/nationsreportcard/itmrlsx/landing.aspx.

## Grade 4 Reading:

Because of segregation-the practice of keeping blacks and whites separate-the early 1900 s were a difficult time for a young black woman to begin a professional singing career. But Marian was determined to sing. "It was something that just had to be done," she remembered. "I don't think I had much to say in choosing it. I think music chose me."

In 1925, Marian won a voice contest in New York, and sang with the New York Philharmonic. Still, her chances to perform in the United States were limited. To build her career, Marian traveled to Europe in 1928, where she became very successful.

## A World-Class Singer Faces Racism

By 1939, Marian was a world-class singer. She returned to the United States to continue her career. But back at home, she faced racism in many ways. Segregation was still common on trains and in hotels
and restaurants. No amount of vocal talent could spare Marian from that.

Even concert halls were segregated, although usually that was limited to the audience. Because black performers often appeared on stage in segregated halls, Marian had no reason to think she would be turned away from Constitution Hall. She believed that musical skill would be the only factor that the DAR would consider.

At first, the DAR told Marian that the date she requested was not available. Then they told her that all of her alternate dates were booked. Eventually, the DAR upheld their policy that only white performers could appear in Constitution Hall.

## A Voice for Civil Rights

When news of the DAR's policy got out, many people were outraged. First Lady Eleanor Roosevelt resigned from the DAR. In a letter, she wrote: "I am in complete
Page 3
disagreement with the attitude taken in refusing Constitution Hall to a great artist .... You had an opportunity to lead in an enlightened way, and it seems to me your organization has failed."

Marian believed strongly in the civil rights movement. She knew firsthand the pain that racism caused. She understood that the way the controversy with the DAR was resolved would be a milestone for civil rights.

Despite public outcry, the DAR would not back down and let Marian sing. With Mrs. Roosevelt's support, the Secretary of the Interior arranged a special concert for Marian, to be held at the Lincoln Memorial. Seventy-five thousand people attended. In many ways, Marian's concert was considered to be America's first civil rights rally. That night, she took a stand against discrimination and for equality. The first words she sang were: "My country, 'tis of thee, sweet land of liberty, of thee I sing."

## The Open-Hearted Way

Marian realized that equality in the United States would be achieved when every person was willing to stand up for what is right. As a public figure, she felt a responsibility to set an example. After the 1939 incident, she did her part by turning down concerts for segregated audiences.
"The minute a person whose word means a great deal dares to take the openhearted and courageous way," she said, "many others follow."

As Marian's career progressed, America changed. She performed in many prestigious locations, including Constitution Hall, where she sang after the DAR changed its policies. By 1954, segregation was declared unconstitutional. The Civil Rights Act was signed into law in 1964, the year Marian retired from performing. By then, many of the barriers she'd had to fight through were disappearing. Marian's farewell tour began in front of an admiring crowd at Constitution Hall.

## Sample \#1

4. Why is "A Voice for Civil Rights" a good heading for the section that follows it on pages 3-4? Use information from the article to suddort your answer.

- Question Description: Marian: Evaluate effectiveness of heading
- Block \& Number: Block R10 Question \#4
- Type of Question: Short Constructed Response
- Item Difficulty: Hard (30.68\% Correct - National data)
- Content Area (2009 and on): Informational
- Cognitive Target (2009 and on): Critique/Evaluate
- Key/Scoring Guide:

## Full Comprehension

Responses at this level explain why the heading is a good one for the section that follows it and use information from the article as support.

- "A Voice for Civil Rights" is a good heading because Marian's concert was considered to be America's first civil rights rally.
- I think this was a good title because it was about a singer that fought for freedom to sing.
- It is a good heading because Marian was singing and fighting for justice so everyone gets treated equally.
- "A Voice for Civil Rights" is a good heading because she sang for civil rights and no segregation.
- This is a good heading for the section because the first lady Eleanor Roosevelt wrote a letter to the DAR that states that she disagrees with their policies of segregation.

## Partial Comprehension

a) Responses at this level provide some information about Marian Anderson/Eleanor Roosevelt related to civil rights OR the civil rights movement, but they do not explain why the heading is a good one for the section that follows.

- Marian believed strongly in the civil rights movement. She knew firsthand the pain that racism caused.
- "A Voice for Civil Rights" is a good heading because Marian had a great voice and Eleanor made it so she could sing.
- It's a good heading because Marian couldn't get in without the civil rights help.
- When news of the DAR's policy got out, many people were outraged.

OR
b) Responses explain why the heading is a good one for the section that follows it, but they fail to support the explanation with information from the article.

- Because she's a singer and she wants civil rights for everyone.
- Marian was singing for the civil rights.
- I think it is a good heading because it talked about Marian's voice and civil rights.

## Little or No Comprehension

Responses at this level provide incorrect information, irrelevant details, or personal opinions. Responses may simply repeat the question.

- She thinks that music chose her. And she won the voice contest.
- Because civil rights means anybody can do it if they feel like it.
- Because Marian was the first lady of the USA.
- Marian has a beautiful voice.

## Sample \#3

6. Explain why Marian Anderson's career was important to the development of the civil rights movement in the United States. Use information from the article to support your answer
$\qquad$
$\qquad$

- Question Description: Marian: Explain a connection with support
- Block \& Number: Block R10 Question \#6
- Type of Question: Extended Constructed Response
- Item Difficulty: Medium (41.13\% Correct - National data)
- Content Area (2009 and on): Informational
- Cognitive Target (2009 and on): Integrate/Interpret
- Key/Scoring Guide:

## Extensive

Responses at this level explain why Marian Anderson's career was important to the development of the civil rights movement and use information from the article as support.

- Marian Anderson's career was important to the development of the movement because her concert at the Lincoln Memorial was considered by many to be the first civil rights rally.
- It was important because if Marian Anderson sang it could be a legal right for other blacks to do things. Winning in Washington could have made a big change.
- Marian Anderson's career was important to the development of the civil rights movement in the United States because she was a great singer that many people liked. People loved her singing, but some people didn't like that she was African American. So, some people wouldn't let her sing, but she soon didn't perform for crowds that were segregated, and after a while people stopped segregation.

## Essential

a) Responses at this level mention a connection between Marian Anderson and the civil rights movement and use information from the article as support but do not discuss the importance of her career to the movement.

- Marian's career was important because she fought a battle with Constitution Hall.
- Marian Anderson believed blacks and whites should be able to sing in the same places, such as Constitution Hall.
- Marian's career was important because she changed America by singing "My country tis of thee and sweet land of liberty, of thee I sing" at the Lincoln Memorial.
OR
b) Responses mention a connection between Marian Anderson's career and the civil rights movement but do not support the connection with information from the article.
- Marian stood up for blacks and their rights, and the things she did helped make sure there would be less discrimination in the future.
- It is important because if one black girl can achieve so much then other female and male black citizens can too. And just because they are black that does not mean that they can be treated differently.
- She wanted people to know that blacks can sing in the same place.
- Her career stopped a lot of segregation.

## Partial

Responses at this level mention details from the article relating to Marian Anderson's career or to civil rights, but they do not explain the importance of Anderson's career to the civil rights movement.

- Although she was black, by 1939 Marian Anderson had performed for presidents and kings.
- There was lots of discrimination at that time.
- Marian wanted to be a singer.
- Blacks should have the same rights as white people.
- Because she loved to sing. She sang for the president and king. She had a concert at the Lincoln memorial.

## Unsatisfactory

Responses at this level provide incorrect information, irrelevant details, or personal opinions. Responses may simply repeat the question.

- Marian was the first lady of the U.S.A.
- She used to have lots of friends.
- I think Marian is a good person.
- I think Marian Anderson's career was important to the development of the civil rights movement in the United States.

## Extensive - Student Response

6. Explain why Marian Anderson's career was important to the development of the civil rights movement in the United States. Use information from the article to support your answer.

7. Explain why Marian Anderson's career was important to the development of the civil rights movement in the United States. Use information from the article to support your answer.
```
Marian conceat was conisioter,
to be Americas fivst ciril righ,
sally.
```

## Scorer Comments:

Both responses provide information from the article to explain why Anderson's career was important to the development of the civil rights movement. The first response focuses on segregation; the second focuses on her concert.

## Essential - Student Response

6. Explain why Marian Anderson's career was important to the development of the civil rights movement in the United States. Use information from the article to support your answer.
Moron Andersons career was important
to the developinent of the canl righto
movement in the United states becase.
She cbonged America by Singing
"My country, tis of thee and sweet
lond of liberty, of thee I sing" and
Eleanar Roosevelt honored her.
7. Explain why Marian Anderson's career was important to the development of the civil rights movement in the United States. Use information from the article to support your answer.
```
Marian Andersons Career was important
to the developement of the civil right
for the united states because she
belived that blacls people could do
what other people could do. She
did what she wantod to do, and
because of that people got the
courge to do what they belived
was right. Marian made a
diffrence for civil rights. She changed
the rules and made them
into rules we nooded.
```

## Scorer Comments:

The first response provides information from the article about the concert and Eleanor Roosevelt to show a connection between Anderson's career and the civil rights movement, but it does not discuss the importance of her career to the movement. The second response mentions a connection between Anderson's career and the civil rights movement, but the connection is general because it fails to provide details from the article as support.

## Partial - Student Response

6. Explain why Marian Anderson's career was important to the development of the civil rights movement in the United States. Use information from the article to support your answer.
Marian Ander Sans Caveer
Was important because she Sang
for many importiont peapic.
7. Explain why Marian Anderson's career was important to the development of the civil rights movement in the United States. Use information from the article to support your answer.
The civd Right Act was
gigned into lawt in 1964

## Scorer Comments:

The first response mentions a detail from the article about Anderson's career, but it does not explain the importance of her career to the civil rights movement. The second response includes a detail connecting the civil rights movement to Anderson's career, but the importance of the connection is not explained.

## Unsatisfactory - Student Response

6. Explain why Marian Anderson's career was important to the development of the civil rights movement in the United States. Use information from the article to support your answer.

7. Explain why Marian Anderson's career was important to the development of the civil rights movement in the United States. Use information from the article to support your answer.
```
Marian Anderson was
imporant to the development
because she wanted to
have rights for civil rights.
```

## Scorer Comments:

Neither response answers the question. The first response is personal opinion. The second is too vague to receive credit.

## Grade 8 Reading:

recalled, "that the power to make the laws was the right through which all other rights could be secured."
Stanton was joined in her campaign by Susan B. Anthony, Sojourner Truth, Lucretia Mott, and other crusaders who would become icons of the women's movement. Some were militant. Many were met with verbal abuse and even violence. Already active in the antislavery movement and temperance campaigns (which urged abstinence from alcohol),
introduced in Congress. The legislation languished for nine years. In 1887, the full Senate considered the amendment for the first time and defeated it by about 2-to-1.
But the suffrage movement was slowly gaining support. With more and more women graduating from high school, going to college, and working outside the home, many Americans began asking: Why couldn't women vote too?

Page 3
Plenty of opposition existed, according to Collins: Democrats feared women would vote for more socially progressive Republicans. The liquor industry, afraid of prohibition, also opposed women's suffrage, as did many people in the South, where blacks had been largely disenfranchised since Reconstruction.

In 1918, after much cajoling and picketing by suffragists, President Woodrow Wilson changed his mind and backed the amendment. The next year, both houses of Congress voted to amend the Constitution. Suffrage advocates predicted quick ratification by the states. (By 1919, 28 states permitted women to vote, at least for President.) Within a little more than a year, 35 of the required 36 states had voted for ratification.
The last stand for anti-suffragists was in Tennessee in the summer of 1920 . Their showdown in the State Legislature became known as the "War of the Roses." (Pro-amendment forces sported yellow roses; the antis wore red.)
After two roll calls, the vote was still tied, 48-48. On the third, Harry T. Burn, a Republican and, at 24, the youngest member of the legislature. switched sides. He was wearing a red rose but voted for ratification because he had received a letter from his mother that read, in part: "Hurrah and vote for suffrage! Don't keep them in doubt! ${ }^{-}$

Burn said later: 7 know that a mother's advice is always safest for her boy to follow and my mother wanted me to vote for ratification. I appreciated the fact that an opportunity such as seldom comes to mortal man-to free $17,000,000$ women from political slavery-was mine."

GRADUAL CHANGE
In 1920, women across America had the right to vote in a presidential election. (In the South, black women and men would be kept off voter rolls in large numbers until 1965, after passage of the Voting Rights Act.)

But newly enfranchised women voted in much smaller numbers than men. Women who were adults at that time had been socialized to believe that voting was socially inappropriate for women," says Susan J. Carroll, senior scholar at the Center for American Women and Politics.
The political and social change sought by
suffragists came gradually and not without fits and starts. An Equal Rights Amendment, stipulating equal treatment of the sexes under the law, was passed by Congress and sent to the states in 1972, but later failed after being ratified by only 35 of the necessary 38 states.
In 1980, however, women surpassed men for the first time in turnout for a presidential election. Since then, there has also been a substantial rise in the number of women running for and holding political office.

## Sample \#1

1. What is the main purpose of the article?
A. To describe the events leading to the passage of the 19th Amendment
B. To identify the states that first supported women's voting rights
C. To discuss the most important leaders of the suffragist movement in the 1800s
E. To explain why the Equal Rights Amendment has not been ratified

- Question Description: Women Vote: Recognize main purpose of article

## Sample \#2

2. Do you think the statements by Abigail Adams in the first paragraph are an effective way to begin the article? Explain why or why not using information from the article.

- Question Description: Women Vote: Evaluate author's craft
- Block \& Number: Block R11 Question \#2
- Type of Question: Short Constructed Response
- Difficulty: Medium (51.34\% Correct - National Data)
- Content Area (2009 and on): Informational

## - Cognitive Target (2009 and on): Critique and Evaluate

## - Key/Scoring Guide:

## Full Comprehension

Responses at this level explain an opinion about whether the statements by Abigail Adams are an effective way to begin the article by making a specific connection between the beginning paragraph and the rest of the article or by demonstrating a more general understanding of how the beginning relates to what follows.

- I think it is a good way to begin the article because it shows that even in 1776 Abigail Adams wanted equal rights for women, and yet it was ignored.
- I do think it is a good way to start the article because it explains the very beginning of the women's rights movement.
- Yes, because it gets you set up for what you are about to read. It starts out talking about fighting for independence, which is close to what the article is actually going to talk about.
- Yes, because it shows that women in this country were very determined to be equal to men....
- No, they should start when women wanted to vote in 1848.

## Partial Comprehension

a) Responses at this level provide a text-based generalization to explain whether the Adams' statements are an effective way to begin the article. They do not demonstrate understanding of how the beginning relates to the rest of the article.

- I think it is because the events lead up to a start of the article.
- Yes, because it gives you what someone famous said about women's equality and it tells you what the article would be mainly about.
- Yes, because it sets the tone of the article and makes it clear about what we will be reading.
- Yes, because it grabbed my attention because it was an historical quote.

OR
b) Responses interpret Abigail Adams's statements, but they do not explain why the statements are or are not an effective way to begin the article. These responses may or may not be expressed as an opinion.

- I think that it is a good way to begin it because it's talking about the rights of independence.
- No, not really because all Abigail is saying is that women don't have the opportunity to vote yet.
- She wanted independence for women.
- The statements by Abigail Adams was an effective way to begin the article. She was standing up for what she believed in and she warned the people that she would rebel.

## Little or No Comprehension

Responses at this level provide irrelevant details or unsupported personal opinions or may simply repeat the question. Or, responses simply repeat what Abigail Adams said without interpreting her statements.

- No, it makes everything confusing.
- I don't think so because it sounds boring.
- Yes, Abigail made a good statement and it was a good introduction.
- Maybe because they should have had a little part about the battles of Lexington and Concord.
- Yes, because she urged with her husband to "Remember the ladies and be more generous and favorable to them and their ancestors."

Full Comprehension - Student Response 2. Do you think the statements by Abigail Adams in the first paragraph are an effective way to begin the article? Explain why or why not using information from the article.

```
I think the statement about
Abjail Adams makes an exellent start
to the article. This simple statemant
allows the reader to trace the suffrage
movement through Wistory. It shars when
wamen fist promised to fight for the
vote.
```

2. Do you think the statements by Abigail Adams in the first paragraph are an effective way to begin the article? Explain why or why not using information from the article.
Yes. brcausf, it snows the main iara
of the slopy. And it shows the
determination of women to get
the right to rote.

## Scorer Comments:

Both responses offer an opinion about whether the statements in the first paragraph are an effective way to begin the article. The first response points out the historical progression of women's suffrage. The second response emphasizes a main idea of the article.

## Partial Comprehension - Student Response

2. Do you think the statements by Abigail Adams in the first paragraph are an effective way to begin the article? Explain why or why not using information from the article.
```
the statelments by abigail Adams, was
an effective way to bering the article.
She was standing up for What she
beleived in and she wamed the
peope that she would rebel.
```

2. Do you think the statements by Abigail Adams in the first paragraph are an effective way to begin the article? Explain why or why not using information from the article.
```
I think the statements were pretty good.
beause it tells the readers' beforehand what
the passoge will be about.
```

## Scorer Comments:

Both responses show partial understanding. The first response indicates an overall comprehension of the Adams statement, but there is no explanation about the effectiveness of beginning the article in this way. The second response expresses an opinion about the effectiveness of the first paragraph, but there is no supporting information from the article.

## Little or No Comprehension - Student Response

2. Do you think the statements by Abigail Adams in the first paragraph are an effective way to begin the article? Explain why or why not using information from the article.
```
yes becauge everyone should have qual
```

voting rights.
2. Do you think the statements by Abigail Adams in the first paragraph are an effective way to begin the article? Explain why or why not using information from the article.
NO Because it doserit go into detail eragh.

## Scorer Comments:

Neither response answers the question correctly. The first response is an unsupported personal opinion. The second response describes a feature of writing in general, not a feature of strong or weak introductions.

## Sample \#3

## Tech-Trash Tragedy

## by Liam O'Donnell

## In our wired world, technology moves at a laser- monitors, and printers at the school. Craig Greshaw,

fast pace. Every day, a new gadget arrives and promises to bring us the future, today. In the race for faster computers and more-powerful gadgets, it's easy to forget about yesterday's high-tech wonders.

Unfortunately, used computers and gadgets end up in landfills across the country. Each year, we throw away 12 million computers. And that is not good news for the environment. To make our gadgets work, many of them use materials like lead and mercury. When mercury and lead end up in a landfill, they spread poisons into the earth, water, and air for miles around. This is called e-wasteand it's becoming a big pollution problem around the world.

Big problems call for big solutions, so adults and kids from dozens of countries are working hard to clean up our e-waste. And you can help, too.

## Turning Old Into New

The trick to stopping e-waste is to catch it before it gets into the landfill. That's why some seventh-grade students at a school in Michigan organized a computer drop-off event. They put up posters and spread the word around the town, telling people to bring out their old computers.
And the people got the message. They dropped off dozens of old computers.
the school's computer teacher who helped organize the event, believes that knowing about computers goes beyond surfing the Web. "Part of that is learning about the chemicals inside the computers and what needs to be done with them to keep them safe," he told the town newspaper during the recycling drive. With their school gym filled with old computers, the students were ready for the next step in cleaning up the high-tech trash: turning old computers into new ones.
That's where companies like RePC step in. The Seattle company takes e-waste and turns it into egold. "Almost all of the parts of a computer can be reused or recycled," says Mark Dabek, owner of RePC. Any computer parts that can't be reused or sold get recycled in a way that won't hurt the environment. "The circuit boards are sent to a circuit board recycler that chops them and sends them to a facility with a very, very hot furnace called the reactor,"- Dabek says. After the computer parts are safely crushed and burned, their raw materials can be reused to make everything from appliances to office buildings.
Sometimes you can make a new computer from the parts of an old computer. Called refurbishing, its what

Page 2

Out with the old and in with the new! Look how it piles up!
© Shaun Van Steyn/Stock Connection \#1428004633
the tech whizzes at RePC do best. Buying a refurbished computer is a lot cheaper than buying a new one. But who wants a computer made up of old parts?

A lot of people, actually. Places like schools and community centers are often short on cash, but need computers to help them get things done. Robert Sterling, a computer teacher at a high school in California, uses computers donated from local businesses to motivate students and teach them about recycling. "If kids learn to recycle everything," says Sterling, "they will set a good example for some of the older people who are not in the habit yet of
recycling every day."
Recycling old computers is big business, and there are many other companies like RePC across the country. Many big charities have computerrecycling
programs too, but be sure to call them first before you drop off any equipment.

Computers aren't the only technology that can be reused. Last year, schools in New Mexico gave old cell phones a new lease on life while also helping to raise money for charity. The students collected eleven garbage bags of old cell phones, sold them to a cell phone refurbishing company, donated the money to charity, and helped keep the environment clean-all at the same time.

Building a Greener Future
Some computer makers are tackling tech trash by
aesignıng more environmentary responsidie products. More new computers are made with recycled plastic and use less electricity. Many also have no lead in their circuits,

7. Based on what you have read in this article, do you think the problem of tech trash will be difficult to solve? Explain your answer using two references to the article.

- Question Description: Tech-Trash: Provide evidence to support an evaluation
- Block \& Number: Block R13 Question \#7
- Type of Question: Extended Constructed Response
- Difficulty: Medium (59.27\% Correct- National Data)
- Content Area (2009 and on): Informational

## - Cognitive Target (2009 and on): Critique/Evaluate

- Key/Scoring Guide:

## Extensive

Responses at this level provide an opinion about whether the problem of tech trash will be difficult to solve and explain the answer using two references to the article.

- I don't think the problem of tech trash will be difficult to solve at all. I think if all the people hear how harmful tech trash can be to their own health they will understand and be helpful recycling their old computers. Now that companies are building computers less likely to harm the environment the general public will understand and do their best to help.
- I believe tech trash will take a while to solve. First, the highly damaging chemicals inside today's technology have been going into landfills for a long time. Second, is because of people's involvement. Not a lot of people are going to willingly take the time to recycle their technology.

## Essential

Responses at this level provide an opinion about whether the problem of tech trash will be difficult to solve and explain the answer using one reference to the article.

- Yes, it will be because the author says we're throwing away 12 million computers.
- No, I don't think tech trash will be difficult to solve because I feel that people will be more likely to buy a recycled, cheaper computer than a new expensive one.

## Partial

a) Responses at this level provide information from the article related to the question but do not connect this information to an opinion.

- We throw away 12 million computers a year.
- RePC is helping turn e-waste into e-gold.

OR
b) Responses provide an opinion but refer generally to the article.

- No, because it's quite easy to collect things (old) to make into new things.
- Tech trash is not difficult to solve because all you have to do is recycle as much as possible.
- If everyone gets involved, then it will not be as complicated because more people are helping.
- It will be hard to solve, because you have to spread the word around to so many people.
- No, because if all people start fighting e-waste by not throwing away old computers then there won't be a problem to solve.

## Unsatisfactory

Responses at this level provide incorrect information, irrelevant details, or unsupported personal opinions. Responses may simply repeat the question.

- I think no because we should recycle most trash.
- Well for some people it will be difficult but for some it will be easy.
- Yes, because people don't listen.
- I think yes, because people don't care about the environment.

## Extensive - Student Response

7. Based on what you have read in this article, do you think the problem of tech trash will be difficult to solve? Explain your answer using two references to the article.
wit be less witi.ult
I think solving the problem of tech trash $A$ because
more and more kids ore getting involved and setting
a goed example for some of the older people
who are not yet in the habit of recycling everydaij,
Another reason why this problem will be less
difficult becouse some computer makers are
designing more envirommentally responsible products.
This is why I think it will be less dilficult to
solve the tech trash problem.
8. Based on what you have read in this article, do you think the problem of tech trash will be difficult to solve? Explain your answer using two references to the article.

## Scorer Comments:

Both responses provide opinions about whether the tech-trash problem will be difficult to solve and support the opinion by using two references to the article. The first response takes a positive stand; the second response provides a negative opinion. Both responses support the opinions with two appropriate references.

## Essential - Student Response

7. Based on what you have read in this article, do you think the problem of tech trash will be difficult to solve? Explain your answer using two references to the article.
```
I do think it will be difficult to solve
because like the article said, we throw away
acound 12 million comprtels a yeal. I think
it will take a long time to salve, but ve
will be able to do it.
```

7. Based on what you have read in this article, do you think the problem of tech trash will be difficult to solve? Explain your answer using two references to the article.

## Scorer Comments:

Both responses give opinions about the tech-trash problem and support the opinion with one reference to the article. The first response indicates that the problem will be difficult to solve. The second response gives one reference to the text supporting the idea that the problem is not a difficult one.

## Partial - Student Response

7. Based on what you have read in this article, do you think the problem of tech trash will be difficult to solve? Explain your answer using two references to the article.
```
No, Because if we stap throwing out old
Computers we'll save the enviornment quickly.
```

7. Based on what you have read in this article, do you think the problem of tech trash will be difficult to solve? Explain your answer using two references to the article.
```
Based on the article \(I\) think the
problem of teeh trash will not be
hord to solve beconse if you oet
evergone envorices to helpi it mon't
be as bad. Artides like these
need to be heard.
```

## Scorer Comments:

Both responses provide opinions about solving the tech-trash problem and support the opinions with general references to the article. More specific references would be needed to obtain a higher score.

## Unsatisfactory - Student Response

7. Based on what you have read in this article, do you think the problem of tech trash will be difficult to solve? Explain your answer using two references to the article.
```
No IdoNo- thinkitwillse hardtyo
3ove, if tereymentwistheir hardest and
really cares,we hammans can doit.
```

7. Based on what you have read in this article, do you think the problem of tech trash will be difficult to solve? Explain your answer using two references to the article.

## Scorer Comments:

The first response provides a characterization of the nature of people that is not text-based. The second response provides only irrelevant details

Other incorrect responses

## Correct - Student Response

12. Mr. Jones picked a number greater than 100.

He told Gloria to divide the number by 18.
He told Edward to divide the number by 15.

Whose answer is greater?

```
O Gloria's Edward's
```

Explain how you know this person's answer will always be greater for any number that Mr. Jones picks.

```
The smaller nuober you divide
    a number 67, the larger the
    anwser.
```

12. Mr. Jones picked a number greater than 100.

He told Gloria to divide the number by 18.
He told Edward to divide the number by 15.
Whose answer is greater?

```
O Gloria's Edward's
```

Explain how you know this person's answer will always be greater for any number that Mr. Jones picks.

$$
\begin{aligned}
& \text { Gloria has a } \\
& \text { bigger \#, so she } \\
& \text { has a smaller \# as } \\
& \text { answer, }
\end{aligned}
$$

## Scorer Comments:

These answers are correct. In each response, the correct oval is selected and an acceptable explanation is given.

## Partial 1 - Student Response

12. Mr. Jones picked a number greater than 100.

He told Gloria to divide the number by 18.
He told Edward to divide the number by 15.
Whose answer is greater?

```
O Gloria's ○ Edward's
```

Explain how you know this person's answer will always be greater for any number that Mr. Jones picks.

$$
\begin{aligned}
& \text { Berave is in smallen than } \\
& 18 \text { so it will tite more } \\
& \text { number to maku the anewer. }
\end{aligned}
$$

## Scorer Comments:

This response is partially correct, as neither oval is selected, but an explanation supporting the correct oval is supplied.

## Partial 2 - Student Response

12. Mr. Jones picked a number greater than 100.

He told Gloria to divide the number by 18.
He told Edward to divide the number by 15.
Whose answer is greater?

```
O Gloria's Edward's
```

Explain how you know this person's answer will always be greater for any number that Mr. Jones picks.

$$
\begin{aligned}
& \text { I picked Edward's anser } \\
& \text { because whenI divided } 100 / 8 \text { I } \\
& 90+\text { SF fovi When I divided } \\
& 100 / 15 \text { I got } 6 \text { R } 10 \text {. }
\end{aligned}
$$

12. Mr. Jones picked a number greater than 100.

He told Gloria to divide the number by 18.

He told Edward to divide the number by 15.
Whose answer is greater?

```
Oloria's E Edward's
```

Explain how you know this person's answer will always be greater for any number that Mr. Jones picks.
because

## Scorer Comments:

These responses are partially correct. In each response, the correct oval was selected and examples were given, but there was no generalization concluding that division by a smaller number yields a larger answer.

## Partial 3-Student Response

12. Mr. Jones picked a number greater than 100 .

He told Gloria to divide the number by 18.
He told Edward to divide the number by 15.
Whose answer is greater?

```
O Gloria's B Edward's
```

Explain how you know this person's answer will always be greater for any number that Mr. Jones picks.
The reason is becouse your divide
by a less number.
12. Mr. Jones picked a number greater than 100 .

He told Gloria to divide the number by 18.
He told Edward to divide the number by 15.
Whose answer is greater?

```
O Gloria's Edward's
```

Explain how you know this person's answer will always be greater for any number that Mr. Jones picks.
Becuase is is lecss fhantighite

## Scorer Comments:

These responses are partially correct. In each response, the correct oval is selected and an incomplete explanation is given.

## Incorrect 1 - Student Response

12. Mr. Jones picked a number greater than 100.

He told Gloria to divide the number by 18.
He told Edward to divide the number by 15.
Whose answer is greater?

```
O Gloria's * Edward's
```

Explain how you know this person's answer will always be greater for any number that Mr. Jones picks.

## Because it is even.

12. Mr. Jones picked a number greater than 100.

He told Gloria to divide the number by 18. He told Edward to divide the number by 15. Whose answer is greater?

```
O Gloria's (0) Edward's
```

Explain how you know this person's answer will always be greater for any number that Mr. Jones picks.

## Scorer Comments:

These responses are incorrect. Each has the correct oval filled in. In the first response an incorrect explanation is given. There is no explanation given in the second response.

## Incorrect 2 - Student Response

12. Mr. Jones picked a number greater than 100.

He told Gloria to divide the number by 18.
He told Edward to divide the number by 15.
Whose answer is greater?

```
Gloria's
O Edward's
```

Explain how you know this person's answer will always be greater for any number that Mr. Jones picks.
because 18 is greater than 15
12. Mr. Jones picked a number greater than 100 .

He told Gloria to divide the number by 18.
He told Edward to divide the number by 15.
Whose answer is greater?

## O Gloria's ○ Edward's

Explain how you know this person's answer will always be greater for any number that Mr. Jones picks.

```
18\longdiv{100 15\sqrt{}{00}}00
```

## Scorer Comments:

These responses are incorrect. In the first response, the incorrect oval is filled in and the explanation is incorrect. In the second response, neither oval is filled in and the explanation given is insufficient.

## Sample \#3

$$
\begin{aligned}
& \text { AMUSEMENT PARK } \\
& 70 \text { things to do! } \\
& \text { 34 rides } \\
& \text { plus games } \\
& \text { plus shows }
\end{aligned}
$$

- Question Description: Solve arithmetic problem using multiple operations (calculator available)
- Block \& Number: Block M8 Question \#19
- Type of Question: Extended Constructed Response
- Item Difficulty: Hard (15.33\% Correct - National data)
- Content Area: Number properties and operations
- Complexity (2005 and on): Moderate
- Key/Scoring Guide:

## Solution:

Sample Correct Response:
$70-34=36$ so there are 36 shows and games.
The number of games is twice the number of shows; there must be 24 games and 12 shows.

## Score \& Description

## Extended

24 games and 12 shows with correct explanation or work

## Satisfactory

Has subtraction error but has games and shows in correct ratio (2:1)
OR
Has 12 games and 24 shows with work
OR
Has 24 games and 12 shows with no work

## Partial

Finds 36, and has ratio of 2 to 1 (but not 24 to 12 ) and sum of games and shows is less than 36
OR

Has 36 games and 18 shows with or without work OR
Has 72 games and 36 shows with or without work
OR
Shows a process that reflects understanding of the question, but does not find the correct ratio

## Minimal

Finds 36 by subtraction or adding on to 34 to get 70
OR
Number of games plus number of shows is 36
OR
Has games and shows in a two to one ratio but nothing else correct

## Incorrect

Incorrect response

## Extended-Student Response

19. An amusement park has games, rides, and shows.

The total number of games, rides, and shows is 70.
There are 34 rides.
There are two times as many games as shows.
How many games are there? 24
How many shows are there? 12
Use numbers, words, or drawings to show how you got your answer.
If you need more room for your work, use the space below.
\(\begin{array}{r}612 <br>
62^{10} <br>
-34 <br>

\hline 36\end{array}\)| 36 |
| :---: | \(\begin{array}{r}12 <br>

\hline 24\end{array}\)
19. An amusement park has games, rides, and shows.

The total number of games, rides, and shows is 70.
There are 34 rides.
There are two times as many games as shows.
How many games are there? 24
How many shows are there? 12
Use numbers, words, or drawings to show how you got your answer.
If you need more room for your work, use the space below.

$$
\begin{aligned}
& 70-34-36 \text { so } 36 \div 3=12 \text { thats the num ber of } \\
& \text { shows there of then yoo suibtraction. }
\end{aligned}
$$

## Scorer Comments:

These extended responses provide correct numerical answers for both parts and give correct explanations showing how the answers were obtained.

## Satisfactory - Student Response

19. An amusement park has games, rides, and shows.

The total number of games, rides, and shows is 70 .
There are 34 rides.
There are two times as many games as shows.

How many shows are there? $\qquad$
Use numbers, words, or drawings to show how you got your answer.
If you need more room for your work, use the space below.
19. An amusement park has games, rides, and shows.

The total number of games, rides, and shows is 70 .
There are 34 rides.
There are two times as many games as shows.

| How many games are there? | 12 |
| :--- | :--- |
| How many shows are there? | 24 |

Use numbers, words, or drawings to show how you got your answer.
If you need more room for your work, use the space below.

$$
\begin{aligned}
& \text { You do } 70-34-36 \text {. The youcstimater } \\
& \text { what number and z times al much } \\
& \text { as the number plus } 34 \text { quale } 70 \text {. } \\
& \text { So I got } 12+24+34=70 \text {. }
\end{aligned}
$$

## Scorer Comments:

These responses are scored as satisfactory. In the first response, correct numerical answers were provided but no explanation was given for the answers. In the second response, a correct procedure was used to arrive at the correct numerical responses, but the numbers were attributed to the wrong categories.

## Partial - Student Response

19. An amusement park has games, rides, and shows.

The total number of games, rides, and shows is 70 .
There are 34 rides.
There are two times as many games as shows.
How many games are there? $\qquad$

Use numbers, words, or drawings to show how you got your answer.
If you need more room for your work, use the space below.
or wed a couclater and paper.
19. An amusement park has games, rides, and shows.

The total number of games, rides, and shows is 70 .
There are 34 rides.
There are two times as many games as shows.
How many games are there? 72
How many shows are there? 36
Use numbers, words, or drawings to show how you got your answer.
If you need more room for your work, use the space below.

```
I minised }70\mathrm{ - wu witen 
1. mas the aholeet for mol many shous
36}\mathrm{ mothy I added that up 
to get how many games thete lucto
72
```

## Scorer Comments:

These responses are partially correct. The first response correctly indicates that there are 36 games and shows and the numerical answers are in the correct ratio, but they do not add to 36 . The second response has 72 games and 36 shows with work shown.

## Minimal - Student Response

19. An amusement park has games, rides, and shows.

The total number of games, rides, and shows is 70 .
There are 34 rides.
There are two times as many games as shows.
How many games are there? $\qquad$
How many shows are there? $\qquad$ 21
Use numbers, words, or drawings to show how you got your answer.
If you need more room for your work, use the space below.
ber subtrackt $70-34=36$ then
you nabo 2 numberontlat youc can pect.
19. An amusement park has games, rides, and shows.

The total number of games, rides, and shows is 70 .
There are 34 rides.
There are two times as many games as shows.

| How many games are there? $\quad 46 \frac{2}{3}$ |
| :--- | :--- |
| How many shows are there? |
| $23!$ |

Use numbers, words, or drawings to show how you got your answer.
If you need more room for your work, use the space below.

## Scorer Comments:

These responses are minimally correct. The first response correctly indicates that there are 36 games and shows, but the numerical answers are not in the ratio of 2 to 1 . The second response correctly gives numerical answers in the ratio of 2 to 1 , but that do not add to 36 .

## Incorrect - Student Response

19. An amusement park has games, rides, and shows.

The total number of games, rides, and shows is 70 .
There are 34 rides.
There are two times as many games as shows.
How many games are there? 36
How many shows are there? 12
Use numbers, words, or drawings to show how you got your answer.
If you need more room for your work, use the space below.
Lalculator
19. An amusement park has games, rides, and shows.

## Sample \#2

9. Bags of Healthy Snack Mix are packed into small and large cartons. The small cartons contain 12 bags each. The large cartons contain 18 bags each.
Meg claimed that she packed a total of 150 bags of Healthy Snack Mix into 2 small cartons and 7 large cartons.
Could Meg have packed the cartons the way she claimed?
Yes No
Show the computations you used to arrive at your answer.

- Question Description: Verify solution to a story problem (calculator available)
- Block \& Number: Block M8 Question \#9
- Type of Question: Short Constructed Response
- Item Difficulty: Easy (64.1\% Correct - National data)
- Content Area: Number properties and operations
- Complexity (2005 and on): Moderate
- Key/Scoring Guide:

## Solution:

Sample Correct Response:
Correct oval: Yes
Solution:

$$
\begin{aligned}
& 2(12)+7(18)=150 \\
& 24+126=150
\end{aligned}
$$

NOTE(S): A correct solution must show one or more of the following.
A "set-up" for the solution (i.e., ${ }^{2 \cdot 12+7 \cdot 18}$ ) $24+126=150$

Both $2 \cdot 12=24$ and $7 \cdot 18=126$
A correct pictorial representation
A solution that shows only $2 \cdot 12=24{ }_{\mathrm{or}} 7 \cdot 18=126_{\text {is incomplete. }}$.
A solution that shows only $24+126$ is incomplete.

## Score \& Description

## Correct 1

Correct oval filled in with correct solution

## Correct 2

Neither oval filled in with correct solution

## Partial 1

Correct oval filled in with incomplete or partially correct solution

## Partial 2

Incorrect oval filled in with correct process (with or without only one computational error)

## Incorrect 1

Correct oval filled in with incorrect or no solution
Incorrect 2
Other incorrect responses

National Assessment of Educational Progress (NAEP), 2011 Mathematics Assessment

## Sample \#3

15. In order to prepare a piece of ground for building a brick patio, a rectangle measuring 8 feet by 10 feet must be marked off. Then the dirt within the rectangle must be dug out to a depth of 6 inches. Finally, the resulting space must be filled with sand.
(a) What is the volume of sand needed, in cubic feet, to fill the space?

Answer: $\qquad$ cubic feet
Show your work. If you used your calculator, show the numbers and operations that you used to get your answer.
(b) Sand costs $\$ 4$ per cubic foot. What is the total cost of the sand needed to fill this space, including a $\$ 35$ delivery charge?
Answer: \$ $\qquad$
Show your work. If you used your calculator, show the numbers and operations that you used to get your answer.

- Question Description: Solve multi-step problem involving volume (calculator available)
- Block \& Number: Block M9 Question \#15
- Type of Question: Extended Constructed Response
- Item Difficulty: Hard (30.09\% Correct - National data)
- Content Area: Measurement
- Complexity (2005 and on): Moderate
- Key/Scoring Guide:

## Solution:

Sample Correct Response:
(a) Answer: 40 cubic feet

Solution: ${ }^{(8)(10)(0.5)}=40$
(b) Answer: \$195

Solution: ${ }^{(\$ 4)(40)+\$ 35=\$ 195}$

## Score \& Description

## Part A

## Correct

Answer of 40 with correct work

## Partial 1

Answer of 40 with incomplete, partially correct, incorrect, or no work

## Partial 2

Answer is not 40, but correct process is shown

## Partial 3

Answer of 480 (does not convert 6 inches to 0.5 foot)
Incorrect
Incorrect response

## Part B

## Correct 1

Answer of 195 with correct work

## Correct 2

Answer is consistent with response to part (a) with correct work

## Partial 1

Answer of 195 with incomplete, partially correct, incorrect, or no work

## Partial 2

Answer is consistent with response to part (a) with incorrect work or no work

## Partial 3

Correct process is shown, but answer from part (a) not used

## Incorrect

Incorrect response

## Composite Score:

Student response received one of five possible composite scores (Extended, Satisfactory, Partial, Minimal, or Incorrect) based on the student's combined performance on Parts A, and B of the item. For example, a student response of Correct for Part A, and Partial 2 for Part B received a composite score of Satisfactory.

| Composite Score | Part A | Part B |
| :---: | :---: | :---: |
| Extended | Correct | Correct 1 |
|  | Correct | Correct 2 |
| Satisfactory | Correct | Partial 1 |
|  | Correct | Partial 2 |
|  | Partial 1 | Correct 1 |
|  | Partial 1 | Correct 2 |
|  | Partial 1 | Partial 1 |
|  | Partial 1 | Partial 2 |
| Partial | Correct | Partial 3 |
|  | Correct | Incorrect |
|  | Partial 2 | Correct 1 |
|  | Partial 2 | Correct 2 |
|  | Partial 2 | Partial 1 |
|  | Partial 2 | Partial 2 |
|  | Partial 3 | Correct 1 |
|  | Partial 3 | Correct 2 |
|  | Partial 3 | Partial 1 |
|  | Partial 3 | Partial 2 |
|  | Incorrect | Correct 1 |
|  | Incorrect | Correct 2 |
| Minimal | Partial 1 | Partial 3 |
|  | Partial 1 | Incorrect |
|  | Partial 2 | Partial 3 |
|  | Partial 3 | Partial 3 |
|  | Incorrect | Partial 1 |
|  | Incorrect | Partial 2 |
| Incorrect | Partial 2 | Incorrect |
|  | Partial 3 | Incorrect |
|  | Incorrect | Partial 3 |
|  | Incorrect | Incorrect |

## Extended - Student Response

15. In order to prepare a piece of ground for building a brick patio, a rectangle measuring 8 feet by 10 feet must be marked off. Then the dirt within the rectangle must be dug out to a depth of 6 inches. Finally, the resulting space must be filled with sand.
(a) What is the volume of sand needed, in cubic feet, to fill the space?

$$
\text { Answer: } 40 \quad \text { cubic feet }
$$

Show your work. If you used your calculator, show the numbers and operations that you used to get your answer.

```
8*10\times.5
```

(b) Sand costs $\$ 4$ per cubic foot. What is the total cost of the sand needed to fill this space, including a $\$ 35$ delivery charge?

Answer: s_195
Show your work. If you used your calculator, show the numbers and operations that you used to get your answer.

$$
54 \times 40+535
$$

15．In order to prepare a piece of ground for building a brick patio，a rectangle measuring 8 feet by 10 feet must be marked off．Then the dirt within the rectangle must be dug out to a depth of 6 inches．Finally，the resulting space must be filled with sand．
（a）What is the volume of sand needed，in cubic feet，to fill the space？

Show your work．If you used your calculator，show the numbers and operations that you used to get your answer．

```
Logic, 6in. is =\frac{1}{2}+t. 8 % 10=
80, }80\times\frac{1}{2}=40\mathrm{ . Logic! People should
use it move often!
```

（b）Sand costs $\$ 4$ per cubic foot．What is the total cost of the sand needed to fill this space， including a $\$ 35$ delivery charge？
Answer s $\quad 195$
Show your work．If you used your calculator，show the numbers and operations that you used to get your answer．

## 4区40日田35

## in calcalator

## Scorer Comments：

The responses for part（a）are correct．They give an answer of 40 cubic feet with correct work．The responses for part（b）are correct．They give an answer of $\$ 195$ with correct work．
Satisfactory－Student Response
15．In order to prepare a piece of ground for building a brick patio，a rectangle measuring 8 feet by 10 feet must be marked off．Then the dirt within the rectangle must be dug out to a depth of 6 inches．Finally，the resulting space must be filled with sand．
（a）What is the volume of sand needed，in cubic feet，to fill the space？

Show your work．If you used your calculator，show the numbers and operations that you used to get your answer．

（b）Sand costs $\$ 4$ per cubic foot．What is the total cost of the sand needed to fill this space， including a $\$ 35$ delivery charge？

Answer：s 195
Show your work．If you used your calculator，show the numbers and operations that you used to get your answer．

## Satisfactory－Student Response

15．In order to prepare a piece of ground for building a brick patio，a rectangle measuring 8 feet by 10 feet must be marked off．Then the dirt within the rectangle must be dug out to a depth of 6 inches．Finally，the resulting space must be filled with sand．
（a）What is the volume of sand needed，in cubic feet，to fill the space？

Show your work. If you used your calculator, show the numbers and operations that you used to get your answer.
(b) Sand costs $\$ 4$ per cubic foot. What is the total cost of the sand needed to fill this space, including a $\$ 35$ delivery charge?
Answer: $\$ 195$
Show your work. If you used your calculator, show the numbers and operations that you used to get your answer.

```
40.4 = 160 +35=195
```

## Satisfactory - Student Response

15. In order to prepare a piece of ground for building a brick patio, a rectangle measuring 8 feet by 10 feet must be marked off. Then the dirt within the rectangle must be dug out to a depth of 6 inches. Finally, the resulting space must be filled with sand.
(a) What is the volume of sand needed, in cubic feet, to fill the space?

Show your work. If you used your calculator, show the numbers and operations that you used to get your answer.
(b) Sand costs $\$ 4$ per cubic foot. What is the total cost of the sand needed to fill this space, including a $\$ 35$ delivery charge?

Answer: $\$ \quad 195$
Show your work. If you used your calculator, show the numbers and operations that you used to get your answer.

## Scorer Comments:

In the first response, part (a) is correct. It gives an answer of 40 cubic feet with correct work. The response for part (b) is partially correct. It gives an answer of $\$ 195$ with no work. In the second response, part (a) is partially correct. It gives an answer of 40 cubic feet with no work. The response for part (b) is correct. It gives an answer of $\$ 195$ with correct work. In the third response, part (a) is partially correct. It gives an answer of 40 cubic feet with no work. The response for part (b) is partially correct. It gives an answer of $\$ 195$ with no work.

## Partial - Student Response

15. In order to prepare a piece of ground for building a brick patio, a rectangle measuring 8 feet by 10 feet must be marked off. Then the dirt within the rectangle must be dug out to a depth of 6 inches. Finally, the resulting space must be filled with sand.
(a) What is the volume of sand needed, in cubic feet, to fill the space?

Show your work. If you used your calculator, show the numbers and operations that you used to get your answer.

(b) Sand costs $\$ 4$ per cubic foot. What is the total cost of the sand needed to fill this space, including a $\$ 35$ delivery charge?
Answer: s 515
Show your work. If you used your calculator, show the numbers and operations that you used to get your answer.

## Partial - Student Response

15. In order to prepare a piece of ground for building a brick patio, a rectangle measuring 8 feet by 10 feet must be marked off. Then the dirt within the rectangle must be dug out to a depth of 6 inches. Finally, the resulting space must be filled with sand.
(a) What is the volume of sand needed, in cubic feet, to fill the space?

Answer $\qquad$ cubic feet
Show your work. If you used your calculator, show the numbers and operations that you used to get your answer.
(b) Sand costs $\$ 4$ per cubic foot. What is the total cost of the sand needed to fill this space, including a $\$ 35$ delivery charge?

Answer s 1,955
Show your work. If you used your calculator, show the numbers and operations that you used to get your answer.

## Scorer Comments:

In the first response, part (a) is partially correct. It shows a correct process but contains a calculation error resulting in an answer of 120 cubic feet. The response for part (b) is correct. It is consistent with the answer in part (a) with work that supports that answer. In the second response, part (a) is partially correct. It does not convert the depth of 6 inches to feet. The response for part (b) is partially correct. It is consistent with the answer in part (a) but does not show the work leading to the answer.

## Minimal - Student Response

15. In order to prepare a piece of ground for building a brick patio, a rectangle measuring 8 feet by 10 feet must be marked off. Then the dirt within the rectangle must be dug out to a depth of 6 inches. Finally, the resulting space must be filled with sand.
(a) What is the volume of sand needed, in cubic feet, to fill the space?

Anemar $\qquad$ cubic feet
Show your work. If you used your calculator, show the numbers and operations that you used to get your answer.
(b) Sand costs $\$ 4$ per cubic foot. What is the total cost of the sand needed to fill this space, including a $\$ 35$ delivery charge?

Answer: $\qquad$

Show your work. If you used your calculator, show the numbers and operations that you used to get your answer.

## $48 \times 4+35=$

15. In order to prepare a piece of ground for building a brick patio, a rectangle measuring 8 feet by 10 feet must be marked off. Then the dirt within the rectangle must be dug out to a depth of 6 inches. Finally, the resulting space must be filled with sand.
(a) What is the volume of sand needed, in cubic feet, to fill the space?

Answer: 80 cubic feet
Show your work. If you used your calculator, show the numbers and operations that you used to get your answer.

## $8 \cdot 10=80$

(b) Sand costs $\$ 4$ per cubic foot. What is the total cost of the sand needed to fill this space, including a $\$ 35$ delivery charge?

Answer: \$ 335
Show your work. If you used your calculator, show the numbers and operations that you used to get your answer.

$$
80 \cdot 4=325+35=335
$$

## Scorer Comments:

The first response for part (a) is incorrect. It gives an answer of 48 cubic feet without showing work. The first response for part (b) is partially correct. It gives an answer consistent with part (a) with an incorrect process. In the second response, the answer for part (a) is incorrect. It gives an answer of 80 cubic feet with incorrect work. The response for part (b) is partially correct. It gives an answer consistent with part (a) with an incorrect process.

## Incorrect - Student Response

15. In order to prepare a piece of ground for building a brick patio, a rectangle measuring 8 feet by 10 feet must be marked off. Then the dirt within the rectangle must be dug out to a depth of 6 inches. Finally, the resulting space must be filled with sand.
(a) What is the volume of sand needed, in cubic feet, to fill the space?

Answer: $\qquad$ cubic feet
Show your work. If you used your calculator, show the numbers and operations that you used to get your answer.

## $8 \times 10 \times 6=480$

(b) Sand costs $\$ 4$ per cubic foot. What is the total cost of the sand needed to fill this space, including a $\$ 35$ delivery charge?

## Answer: $\mathrm{s} \quad \mathrm{HLO}$

Show your work. If you used your calculator, show the numbers and operations that you used to get your answer.

```
480\div4+35=140
```

## Incorrect - Student Response

15. In order to prepare a piece of ground for building a brick patio, a rectangle measuring 8 feet by 10 feet must be marked off. Then the dirt within the rectangle must be dug out to a depth of 6 inches. Finally, the resulting space must be filled with sand.
(a) What is the volume of sand needed, in cubic feet, to fill the space?

Answer: $\qquad$ cubic feet

Show your work. If you used your calculator, show the numbers and operations that you used to get your answer.
(b) Sand costs $\$ 4$ per cubic foot. What is the total cost of the sand needed to fill this space, including a $\$ 35$ delivery charge?

Answer: s 67
Show your work. If you used your calculator, show the numbers and operations that you used to get your answer.

## Incorrect - Student Response

15. In order to prepare a piece of ground for building a brick patio, a rectangle measuring 8 feet by 10 feet must be marked off. Then the dirt within the rectangle must be dug out to a depth of 6 inches. Finally, the resulting space must be filled with sand.
(a) What is the volume of sand needed, in cubic feet, to fill the space?

Show your work. If you used your calculator, show the numbers and operations that you used to get your answer.

(b) Sand costs $\$ 4$ per cubic foot. What is the total cost of the sand needed to fill this space, including a $\$ 35$ delivery charge?

Answer: s 285.00
Show your work. If you used your calculator, show the numbers and operations that you used to get your answer.

$$
4 \times 80-35=285
$$

## Scorer Comments:

In the first response, part (a) is partially correct. It does not convert the depth of 6 inches to feet. The response for part (b) is incorrect. It shows an answer of 140 with incorrect work. In the second response, part (a) is blank. The response for part (b) is partially correct. It shows a correct process, but the answer from part (a) is not used. In the third response, part (a) is incorrect. The answer provided and the work shown are both incorrect. The response to part (b) is incorrect. The answer provided and the work shown are both incorrect and are not consistent with the answer to part (a).

Assessments.

## APPENDIX E: Summary of Scale Score Comparisons

2011 NAEP Average Scale Scores by Subject and Grade level for Large City and TUDA Districts

* Large City (LC): Nation-wide schools in cities with a population of 250,000 or more as defined by National Center for Education Sattistics (NCES)
** Distict participate in TUDA for the first time in 2011.
(Intentionally left blank)
